WWW.DIRIGOLAB.COM

Revision 1: May 13, 2022, the following changes were made for appliance renewal:

- Added CO in grams/ minute
- Dual Train precision comparison calculated in both % and g/kg.
- Updated owners manual to include warranty information.
- Included unused run data Appendix A.
- Manufacturer operating instructions provided to lab added to Appendix A
- Added Firebox volume drawing

Revision 2: September 2, 2022, the following revisions were made upon request from EPA:

- Added fuel load density information to the fuel load data sheets, see Appendix A.
- Correct report firebox volume is several places to make consistent throughout the report, see fuel load sheets in Appendix A, and appliance dimensions on Page 22

Table of Contents

Affidavit:

Dirigo Laboratories, Inc. was contracted by Pacific Energy Fireplace Products Ltd. to provide testing services for the Super LE (formerly known as the Super (Series E)) aka: Super Heritage, Super Classic, and Alderlea T5 non-catalytic wood fired heater per EPA Method 28R for Certification and Auditing of Wood Heaters. All testing and associated procedures were conducted at Dirigo Laboratories, Inc. beginning on 2/28/2017 and ending on 3/11/2017. Upon completion of testing, the name of the appliance was changed from the Super (Series E) to the Super LE. No physical changes were made to the appliance and all test results for the formerly named Super (Series E) are valid for the Super LE. No additional testing was required. Dirigo Laboratories is located at 11785 SE Highway 212 – Suite 305, Clackamas, Oregon 97015. Testing procedures followed EPA Method 28R and ASTM E2780-10. Particulate sampling was performed per ASTM E2515-10 *Standard Test Method for Determination of Particulate Matter Emissions Collected by a Dilution Tunnel.*

Dirigo Laboratories is accredited by the U.S. Environmental Protection Agency for the certification and auditing of wood heaters pursuant to subpart AAA of 40 CFR Part 60, New Source Performance Standards for Residential Wood Heaters and subpart QQQQ of 40 CFR Part 60, Standards of Performance for New Hydronic Heaters and Forced Air Furnaces, Methods 28R, 28WHH, 28 WHH-PTS, and all methods listed in Sections 60.534 and 60.5476. Dirigo holds EPA Accreditation Certificate Numbers 4 and 4M (mobile). Dirigo Laboratories, Inc. is accredited by A2LA to ISO 17020:2012 "Criteria for Bodies Performing Inspections, ISO 17025:2005 "Requirements for Testing Laboratories", and ISO 17065:2012 "Requirements for Bodies Operating Product Certification Systems". Dirigo holds A2LA Certificate Numbers 3726.01, 3726.02, and 3726.03. See Appendix E for Accreditations.

The following people were associated with the testing, analysis and report writing associated with this project.

Doug Towne, QA Manager

Introduction:

Pacific Energy Fireplace Products Ltd. of Duncan, BC, contracted with Dirigo Laboratories, Inc. to perform EPA certification testing on their Super LE (formerly known as the Super (Series E)) non-catalytic wood heater. The Super LE firebox is used in the Super Heritage, Super Classic, and Alderlea T5. Upon completion of testing, the name of the appliance was changed from the Super (Series E) to the Super LE. No physical changes were made to the appliance and all test results for the formerly named Super (Series E) are valid for the Super LE. No additional testing was required. All testing was performed at Dirigo Laboratories, Inc. Testing was performed by Mr. Ben Nelke.

Notes:

- 48 hours aging was performed on the appliance by the manufacturer prior to the test series. The additional 2 hours were achieved at Dirigo Laboratories, Inc. – See runs 1, 1A & 1B
- Prior to testing, the dilution tunnel was cleaned with a steel brush.
- Run #'s 1C, 2, 3 & 4 were performed with the convection blower in operation. The blower confirmation run, Run #5, was performed with the convection blower turned off.
- Front filters were changed on sample train A at one hour for all runs.
- Stove operating instructions provided by manufacturer added to appendix A
-

Wood Heater Identification and Testing:

- Appliance Tested: ***Super LE (formerly known as the Super (Series E)), aka: Super Classic, and Alderlea T5***
- Serial Number: ***50230869***
- Manufacturer***: Pacific Energy Fireplace Products Ltd.***
- Catalyst: ***No***
- Heat exchange blower: ***Optional***
- Type: ***Wood Stove***
- Style: ***Free Standing***
- Date Received: ***Tuesday, January 24, 2017***
- Wood Heater Aging: ***December 13, 2016 - January 25, 2017***
- Testing Period – Start: ***Tuesday, February 28, 2017*** Finish: ***Saturday, March 11, 2017***
- Test Location: ***Dirigo Laboratories, Inc. 11785 SE HWY 212 - Suite 305, Clackamas, OR 97015***
- Elevation: **≈131** ***Feet above sea level***
- Test Technician(s): **Ben Nelke**
- Observers: ***Ken Davis***

Test Procedures and Equipment:

All Sampling and analytical procedures were performed by Ben Nelke. All procedures used are directly from EPA Method 28R, ASTM E2780-10 and ASTM E2515-10. See the list below for equipment used. See Appendix D for calibration data.

Equipment List:

1. Analyzer -California Analytical ZRE CO2/CO/O2 IR ANALYZER
2. Delmhorst J-2000 Wood Moisture Meter
3. Dayton 4c121 Blower for dilution tunnel -Emissions Booth #1
4. ScienTech Balance Scale
5. 10 lb Calibration Weight
6. DigiWeigh Bench Shipping Scale
7. APEX XC-60 Digital Emissions Sampling Box A
8. APEX XC-60 Digital Emissions Sampling Box B
9. APEX Ambient sampling box
10. Gast MOA-P122-AA Vacuum Pump
11. Rice Lake 3'x3' floor scale w/digital weight indicator

Results:

The weighted average emission rate is **1.8 g/hr** with a weighted average efficiency of **71.3%** and a weighted average CO **1.97 g/min.** The Pacific Energy Fireplace Products Ltd. Model Super LE non-catalytic wood heater meets the 2020 PM emission standard of ≤ 2.0 g/hr per CFR 40 part 60, §60.532 (b).

Detailed individual run data can be found in separate digital folders supplied with this report.

Emissions:

DIRIGO LABORATORIES INC.

Weighted particulate emission average of 4 test runs: 1.8 grams per hour.				
Weighted average HHV efficiency of 4 test runs: 71.3%.				
Average CO emission rate for 4 test runs: 1.97 grams per minute				

Run 1:

Run 1, performed on 2/28/17, was an attempt at a category II (<1.00) burn rate. During the course of the run, a loud “pop” was heard by the Dirigo Labs Test Technician. The run continued but the burn characteristics did not resemble anything the Test Technician had observed in all previous assessment runs. The client was contacted for their input and guidance. The client decided to send their representative, Ken Davis, to inspect the appliance prior to additional certification runs.

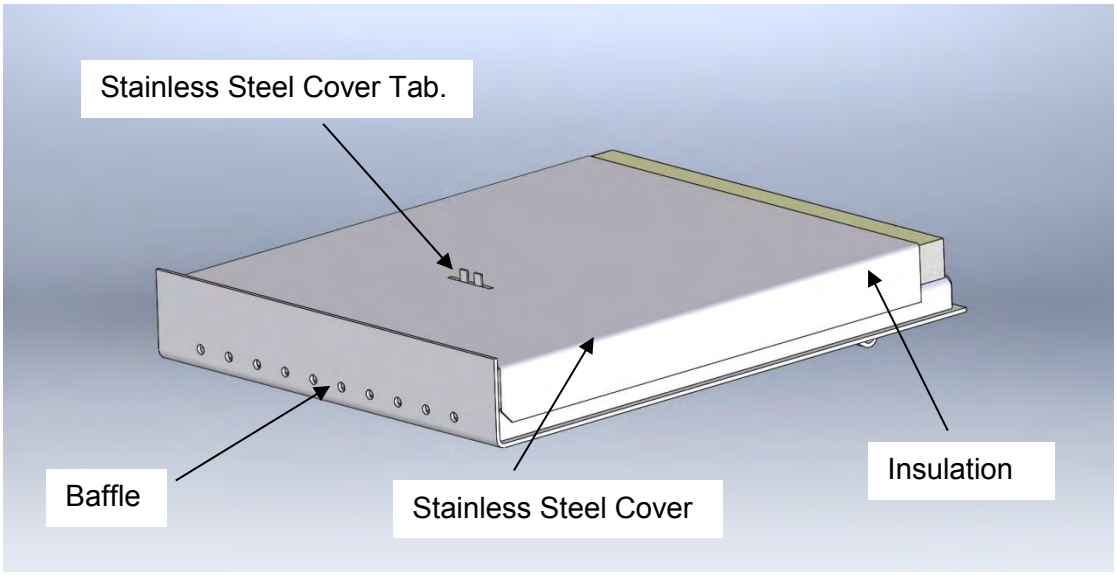
Run 1A:

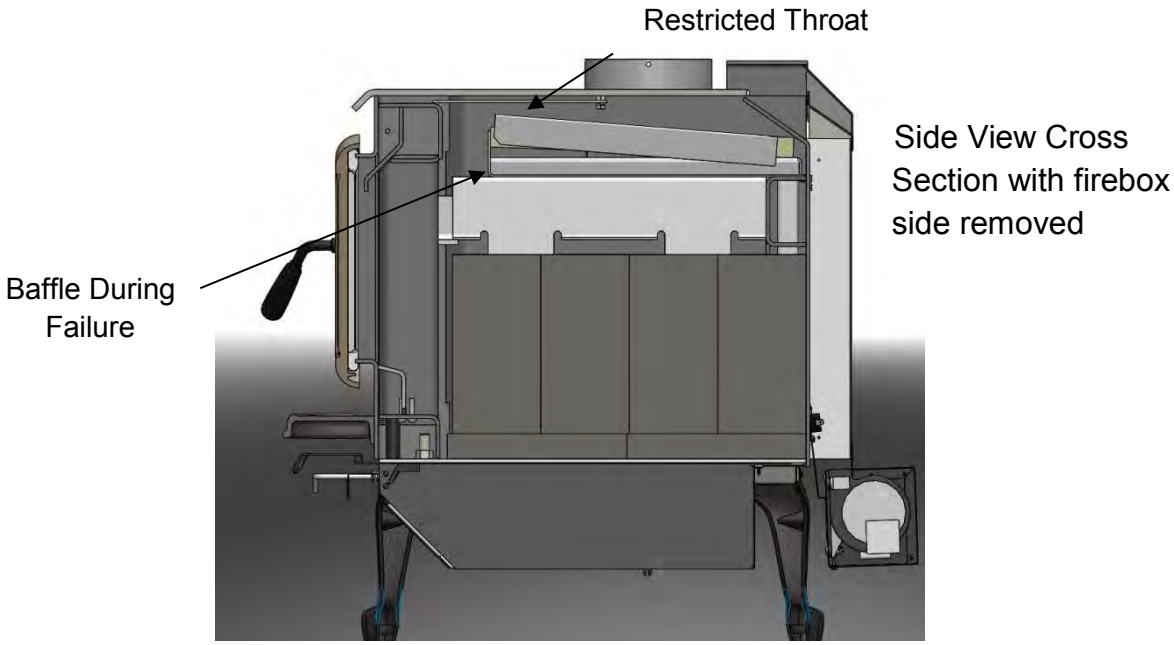
On 3/2/17 the stove was inspected by Ken Davis. Mr. Davis was unable to find any obvious problems with the stove. Based on information from Run 1, Mr. Davis made the decision to make a design change to the stove to increase the minimum stop from 0.250” to 0.266”. Run 1A was started and the primary was set to fully closed 5 minutes into the test run. During the run Mr. Davis observed that the burn characteristics

continued to be very different than what was expected from previous R&D runs (performed by Pacific Energy) and assessment runs. The test run also exceeded allowable Delta T (134°).

Friday March 3, 2017:

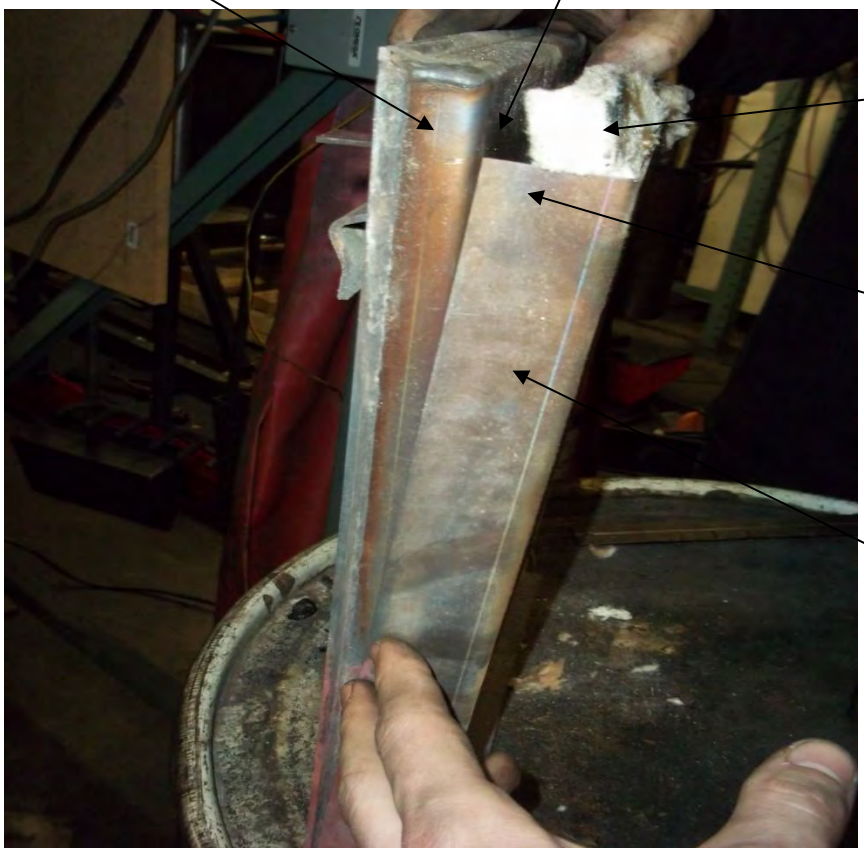
During Run 1A, Mr. Davis had observed that the Super LE was not performing as expected. The Super LE baffle was removed from the appliance. It was discovered that the stainless steel cover holding the baffle insulation in place had failed at the Tab causing combustion to occur between the baffle and the insulation cover. This caused the baffle to bow and warp at this position which pushed the baffle insulation cover up into the throat area thus restricting the outlet of the stove.





Baffle

Separation between Baffle and Insulation/Cover



Insulation

Baffle Removed from test unit. Stainless Cover separating from Baffle

Stainless Steel Cover

Baffle Tab

Baffle Tab damaged during operation leaving large gap between cover and tab

A new Baffle was installed on March 3, 2017 and an assessment run was performed on the appliance (Assessment #14).

Run 1B:

On March 4, 2017, certification of the Super LE wood heater began again with an attempt at a low burn. As in Run 1A, the test exceeded allowable Delta T (133°). However, the stove appeared to be burning as expected.

Run 1C:

Run 1C was a category II burn rate (<1.00 kg/hr per 8.1.1.3.2 of Method 28 Note) performed on 3/7/17. The test duration was 5 hours 40 minutes. The fuel weight was 14.1 lbs. There was an average particulate emissions rate of 2.42 g/hr. The run had an overall efficiency of 70.8%. The A filter was changed at 1 hr. The 1-hour filter catch was 10.7 mg. All test results were appropriate and valid. The burn rate category was achieved. There were no anomalies and all criteria were met.

Run 2:

Run 2 was a category II burn rate performed on 3/8/17. The test duration was 4 hours 40 minutes. The fuel weight was 14.0 lbs. There was an average particulate emissions rate of 1.21 g/hr. The run had an overall efficiency of 71.6%. The A filter was changed

at 1 hr. The 1-hour filter catch was 4.9 mg. All test results were appropriate and valid. The burn rate category was achieved. There were no anomalies and all criteria were met.

Run 3:

Run 3 was a category III burn rate performed on 3/9/17. The test duration was 3 hours 30 minutes. The fuel weight was 14.0 lbs. There was an average particulate emissions rate of 1.90 g/hr. The run had an overall efficiency of 72.7%. The A filter was changed at 1 hr. The 1-hour filter catch was 5.6 mg. All test results were appropriate and valid. The burn rate category was achieved. There were no anomalies and all criteria were met.

Run 4:

Run 4 was a category IV burn rate performed on 3/10/17. The test duration was 1 hour 50 minutes. The fuel weight was 14.4 lbs. There was an average particulate emissions rate of 1.39 g/hr. The run had an overall efficiency of 68.8%. The A filter was changed at 1 hr. The 1-hour filter catch was 2.1 mg. All test results were appropriate and valid. The burn rate category was achieved. There were no anomalies and all criteria were met.

Run 5:

Run 5 was a fan confirmation run performed on 3/11/17. The test duration was 4 hours 40 minutes. The fuel weight was 14.0 lbs. There was an average particulate emissions rate of 3.28 g/hr. Per Method 28 & ASTM E2515-10 a category II run was performed with the fan in the off position. The emission rate resulting from this test run without the blower operating is equal to or less than the emissions rate plus 1.0 g/h for the test run in the medium burn rate category with the blower operating. Because of this, the wood heater is considered to have the same average emissions rate with or without the blower operating. Additional test runs without the blower operating are unnecessary.

Precision:

Dual Train Comparison (ASTM E2515 11.7 - If either criterion (7.5% of average or 0.5 g/kg difference) is met, the run is valid.									
Run #	Train A % of avg.	Train B % of avg.	Max Dif.	<7.5% of average?		Train A g/kg	Train B g/kg	Dif.	<0.5 g/kg from each other?

Process Operations and Description:

The appliance was operated according to procedures as described in the Operations Manual. Detailed run information can be found in corresponding digital folders submitted with this report.

Settings & Run Notes

	Run Notes	
	Pre-Burn	**Test Run**
Run 1C	Primary fully closed. Start at 1314	Category II (<1.00 kg/hr). Test start: 1418 - Door open 1 minute 10 seconds, Primary fully open, fan off. Primary set to fully closed at 5 minutes into test. Fan set to high at 1432. Front Filter change at 1518. END test: 1958 – Run time 5 hours, 40 minutes.
Run 2	Primary set to $^{5}/_{16}$". Start at 1248	Category II. Test start: 1354 - Door open 1 minute, Primary fully open, fan off. At 5 mins Primary air set to $^{5}/_{16}$", fan off. Fan set to high at 1409. Front Filter change at 1454. END test: 1834 – Run time 4 hours, 40 minutes.
Run 3	Primary set to 0.400". Start at 1345	Category III: Test start: 1453 – Door open 1 minute, Primary fully open, fan off. At 5 mins Primary set to 0.400", fan off. Fan set to high at 1503. Front filter change at 1553. END Test: 1823 - Run time 3 hours 30 minutes.
Run 4	Primary set to 1 ½". Start at 1246	Category IV: Test start: 1353. Door Open 1 minute, Primary air fully open and left open for entire run. Fan on high. Front filter changed at 1453. END test: 1543 - Run Time: 1 hours 50 minutes.
Run 5	Primary fully closed. Start at 1220	Fan Confirmation - Fan OFF. Category II: Test start: 1348. Door open 1 minute 10 seconds, Primary fully closed and stayed closed, fan off. Fan remained off for entire test. Changed front filter at 1448. END test: 1828 - Run time: 4 hours 40 minutes.

Appliance Description

Model(s): Super LE, Super Heritage, Super Classic , Alderlea T5

Additional Models Discussion: The tested model , Super LE is the base model for this line for stoves which is also offered as models Super Heritage, Super Classic and the Alderlea T5. The difference between the models is limited to style and color. All models use an identical design in all aspects that may affect emissions and are presumed to have the same emission performance as the tested unit provided for certification.

Appliance Type: Residential wood-fired room heater

Firebox Volume: 2.15 Cu.Ft.

Automatic Control:

Air Introduction System: Primary Air enters the firebox from the front bottom of the appliance and is channeled up the sides on the appliance and down through the air wash, as well as through a pilot air opening in the front of the firebox. Primary air is controlled via a damper arm located on the right side of the stove which moves back (open) to front (closed). Secondary air is pulled through a fixed opening in to rear bottom of the appliance and channeled into the insulated stainless steel baffle. Dimensions on all these features can be found in Appendix D.

Baffles: Combustion air is routed into the insulated stainless steel baffle from the bottom of the unit

Refractory Insulation: Firebox is lined with 1” firebrick.

Flue Outlet: 6-inch exhaust outlet located on the top of the appliance.

Catalytic Combustor: N/A

Fan: The Super LE is optionally equipped with a convection blower that attaches to the rear of the appliance.

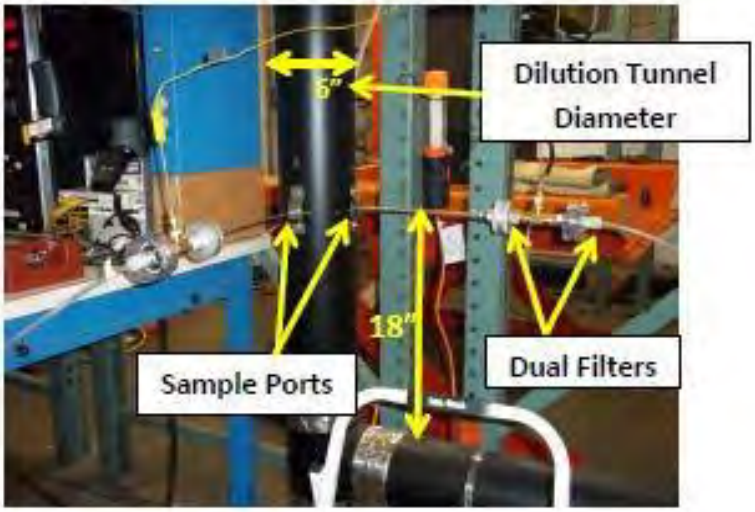
Test Fuel Properties:

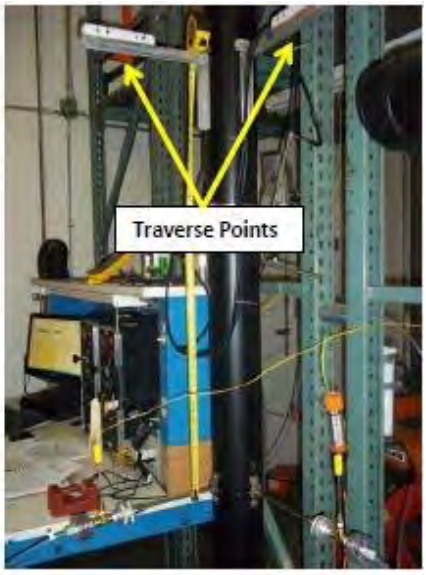
Fuel consisted of 2”x4”x15.5” and 4”x4”x15.5” Green, Douglas fir. Detailed fuel load specifications for each run can be found in the corresponding digital folders submitted with this report.

Sampling Locations and Descriptions:

Sample ports are located 16.5 feet downstream from any disturbances and 1 foot upstream from any disturbances. Flow rate traverse data was collected 12 feet downstream from any disturbances and 5.5 feet upstream from any disturbances. (See below)

Sample Points





Sampling Methods:

EPA ASTM E2515-11 was used in collecting particulate samples. The dilution tunnel is 6 inches in diameter. All sampling conditions per ASTM E2515-11 were followed. No alternate procedures were used.

Analytical Methods Description:

All sample recovery and analysis procedures followed EPA ASTM E2515-11 procedures. At the end of each test run, filters and probes were removed from their housings, dessicated for 24 hours, and then weighed at 6 hour intervals to a constant weight per ASTM E2515-11 Section 11.0.

Calibration, Quality Control and Assurances:

Calibration procedures and results were conducted per EPA Method 28R, ASTM E2515-11 and ASTM E2780-10. Test method quality control procedures (leak checks, volume meter checks, stratification checks, proportionality results) followed the procedures outlined.

Appliance Sealing and Storage:

Following securing with metal strapping and the seal below, the appliance was placed into storage at client facilities located at: 2975 Allenby Road, Duncan, BC, Canada, V9L 6V8.

Sealing Label

Sealed Unit

ATTENTION:
THE SEAL IS NOT TO BE BROKEN WITHOUT PRIOR AUTHORIZATION
BY THE UNITED STATES ENVIRONMENTAL PROTECTION AGENCY.
THIS APPLIANCE HAS BEEN SEALED IN ACCORDANCE WITH

Sampling and Analytical Procedures

All Sampling and analytical procedures were performed by Ben Nelke. All procedures used are directly from EPA Method 28R, ASTM 2515-11 and ASTM E2780-10. No alternative procedures were used for this test series.

Participants

The following personnel performed all testing:

- Ben Nelke

Analysis and Report Writing

The following people were involved with analysis and report writing:

- Ben Nelke, Doug Towne, Jeremy Clarke

Observers:

The following people were observers during testing:

- Ken Davis

Appliance Updates

No updates to the appliance were made.

Test Equipment Calibration Audit:

- Calibrations for the platform scale and bench scale were performed with Certified Class F weights
- Moisture meter calibration was performed with Delmhorst moisture meter calibrator
- Gas Analyzer calibration performed with certified EPA Protocol gases
- 47mm filters weighed to a constant weight with calibrated analytical balance

All equipment calibration data submitted in separate digital file along with this report.

List of Appendices

The following appendices have been submitted electronically in conjunction with this report:

Appendix A – Test Run Data, Technician Notes, Sample Analysis, and Alternate Test Method Approval

Appendix B – Labels and Manuals

Appendix C –Equipment Calibration Records

Appendix D – Design Drawings (CBI Report Only)

Appendix E – Manufacturer QAP (CBI Report Only)

Accreditations:

CERTIFICATE OF ACCREDITATION

This certifies that:

Oirigo Laboratories, Inc.

Has satisfied the requirements for laboratory accreditation for the certification of wood heaters pursuant to subpart AAA of 40 CFR Part 60, New Source Performance standards For Residential Wood Heaters and subpart QQQQ of 40 CFR Part 60, Standards of Performance for New Hydronic Heaters and Air Furnaces.

Dirigo Laboratories, Inc.

Manufacturer:	**Pacific Energy**
Model:	**Super (Series E)**
Date:	**3/16/2017**
Run:	**3**
Control #:	**034-S-076-1**
Test Duration:	**210**
Output Category:	**3**

	HHV Basis	LHV Basis
Overall Efficiency	72.7%	78.6%
Combustion Efficiency	93.4%	93.4%
Heat Transfer Efficiency	77.9%	84.2%

HHV Output Rate (kJ/h)	21,651	20,539	**(Btu/h)**
Burn Rate (kg/h)	1.50	3.31	**(lb/h)**
Input (kJ/h)	29,762	28,233	**(Btu/h)**

Test Load Weight (dry kg)	5.3	11.6	**dry lb**
MC wet (%)	17.22		
MC dry (%)	20.80		
Particulate (g)	6.66		
CO (g)	477		
Test Duration (h)	3.5		

Emissions	Particulate	CO
g/MJ Output	0.09	6.30
g/kg Dry Fuel	1.27	90.77
g/h	1.90	136.37
lb/MM Btu Output	0.20	14.64

Air/Fuel Ratio (A/F)	9.75

Test Results in Accordance with CSA B415.1-10

VERSION: 2.4 4/15/2010

lanufacturer: Pacific Energy
Model: Super (Series E)
Date: 3/16/2017
Run: 2
Control #: 034-S-076-1
est Duration: 280
urn Category 2

Expanded Uncertainty ± 0.034642 Inches

Remarks:

We sincerely thank you for your business.

Please call us at 1-800-356-4662 for all your calibration needs.

Cleaning and preventive maintenance were preformed before calibration of this equipment.

A Test Accuracy Ratio (TAR) of at least 4:1, if achievable, is maintained unless otherwise stated. This uncertainty expression is expanded at approximately 95% confidence level, coverage factor (k=2).

This is to certify that the equipment herein identified has been inspected and calibrated in accordance with standard procedures set forth and is found in accordance with manufacturer and ASTM specifications. Cal-Cert Procedure CP-115

Accredited by the International Accreditation Service, Inc. (IAS) under Calibration Laboratory Code CL-108 & CL-157.
This Laboratory meets the requirements of ISO/IEC 17025 AND ANSI/NCSL Z540.3

This Certificate is issued as a statement of the fact that on this date the above instrument(s) had an accuracy as indicated. It should not be construed or regarded as a Guarantee or Warranty of any kind (in favor of the client, the client's customers, or the public at large) that the instrument(s) will continue to retain the same percentage (%) of accuracy or efficiency as determined on the date when the calibration, and adjustments if required, was performed and reported by "CAL-CERT", since the calibrator has absolutely no control over the future operation, damage, maintenance, repairs, and overall condition of the instrument(s) and hereby expressly disclaims any and all liability for damage or loss sustained by all parties arising or resulting from deterioration, obsolescence, malfunction, or substandard performance of said instrument(s); which shall be deemed to be and which shall remain the sole responsibility of the machines regular custodian, owner, and/or manufacturer.

Remarks:

We sincerely thank you for your business. Please call us at 1-800-356-4662 for all your sales and calibration needs.
Cleaning and preventative maintenance were performed as part of this service.

Cal-Cert is accredited by the International Accreditation Service, Inc. (IAS) under Calibration Laboratory Code CL-108 & CL-157.
IAS is recognized under the ILAC mutual recognition agreement (MRA).

This certificate is hereby issued that the above instrument was tested for accuracy with calibrated standards traceable to the National Institute of Standards and Technology (NIST). The information provided on this form complies with the data gathering and reporting requirements of ISO/IEC 17025 and ANSI/NCSL Z540.3, and meets the requirements of all applicable references and Cal-Cert procedures listed above.
Any stated measurement uncertainty includes the uncertainty of the Calibration standards used, combined with the uncertainty of the measurement process using the RSS method with a k=2 for an approximate 95% level of confidence. The calibration process meets or exceeds a ratio of 4:1 unless otherwise stated.
All tolerances were derived from the applicable standards and pass/fail determination is based on those tolerances. The customer determined any recommended due dates indicated on the certificate.
This report shall not be reproduced except in full, without written approval from Cal-Cert.

Comments/Information Concerning this Calibration
12/21/2016: Large Furnace on balance. Customer weighs difference in fuel at a load of around 100lbs. 6/16 Added woodstove(deadload) of 622 lbs. Check range from 1000-1622 on top of the 0-1000 lbs. Values had no count of errors.

Report prepared/reviewed by: N. KILMER **Date:** 12-21-16 **Technician:** N.Kilmer
Signature:

The uncertainty is calculated according to the ISO Guide to the Expression of Uncertainty in Measurement and includes the uncertainty of standards used combined with the observed standard deviation of the unit under test. The uncertainty is expanded with a k factor of 2 for an approximate 95% level of confidence. Instruments listed above were calibrated using standards traceable to the National Institute of Standards and Technology (NIST). Calibration data reflect results at the time and location of calibration. Calibration data should be reviewed to insure that the instrument is performing to its required accuracy.

Comments/Information Concerning this Calibration

6/17 - RH = 52.5%

Report prepared/reviewed by: Jake C **Date:** 6/27/17 **Technician:** D.Oudeans

Signature: DOudeans

The uncertainty is calculated according to the ISO Guide to the Expression of Uncertainty in Measurement and includes the uncertainty of standards used combined with the observed standard deviation of the unit under test. The uncertainty is expanded with a k factor of 2 for an approximate 95% level of confidence. Instruments listed above were calibrated using standards traceable to the National Institute of Standards and Technology (NIST). Calibration data reflect results at the time and location of calibration. Calibration data should be reviewed to insure that the instrument is performing to its required accuracy.

Table of Contents

Contents

PLEASE SAVE THESE INSTRUCTIONS

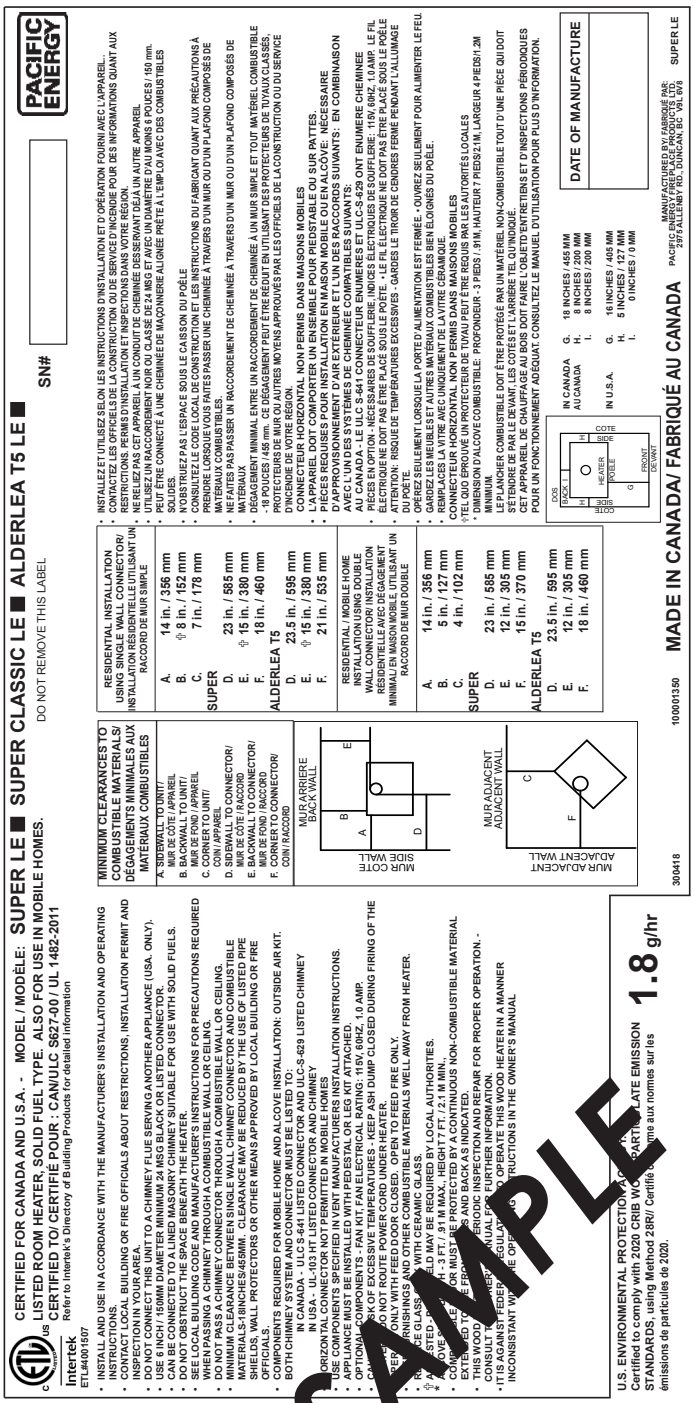
NOTE: WE STRONGLY RECOMMEND THAT SMOKE AND CARBON MONOXIDE DETECTORS BE INSTALLED IN THE AREA WHERE THE HEATER IS TO BE INSTALLED.
If smoke detectors have been previously installed, you may notice that they are operating more frequently. This may be due to curing of stove paint or fumes caused by accidentally leaving the fire door open. Do not disconnect the detectors.

SAFETY NOTICE: If this stove is not properly installed, a house fire may result. For your safety, follow the installation instructions. Contact local building or fire officials about restrictions and installation inspection requirements in you area.

Please read this entire manual before you install and use your new room heater. Failure to follow instructions may result in property damage, bodily injury, or even death.

Experience will give you the right settings for proper combustion and efficient burning. Remember the correct air inlet setting is affected by variables such as type of wood, outside temperature, chimney size and weather conditions. With practice, you will become proficient in operating your heater and will obtain the performance for which it was designed.

Rating Label



PLEASE SAVE THESE INSTRUCTIONS

This manual describes the installation and operation of the Pacific Energy, SUPER LE / SUPER CLASSIC LE Freestanding wood heater.

SAFETY NOTICE:
This wood heater needs periodic inspection and repair for proper operation. It is against federal regulations to operate this wood heater in a manner inconsistent with the operating instructions in this manual.

This heater meets the 2020 U.S. Environmental Protection Agency's crib wood emission limits for wood heaters sold after May 15, 2020 using Method 28R.

Model SUPER LE / SUPER CLASSIC LE: 1.8 g/hr..

Under specific test conditions this heater has been shown to deliver heat at rates ranging from 12,500 to 38,200Btu/ hr.

Efficiency and BTU Output

EPA Certified Emissions	1.8 grams per hour
LHV Tested Efficiency 1	77.1%
HHV Tested Efficiency 2	71.3%
EPA BTU Output 3	12,518 to 38,177 btu/hr.
Maximum Wood Length	18 inches
Ideal Wood Length	17 inches
Fuel	Seasoned Cord wood

1 Weighted Average Lower Heating Value (LHV) efficiency as tested using CSA B415 Performance testing of solid-fuel-burning heating appliances. LHV assumes the moisture is already in a vapour state so there is no loss of energy

2 Weighted Average Higher Heating Value (HHV) efficiency as tested using CSA B415 Performance testing of solid-fuel-burning heating appliances. HHV includes the energy required to vaporize the water in the fuel

3 The range of BTU outputs is based on efficiency using CSA B415 Performance testing of solid-fuel-burning heating appliances and burn rates from the low and high EPA tests using Douglas Fir dimensional lumber.

Safety

CAUTION: Never use gasoline, gasoline type lantern fuel, kerosene, charcoal lighter fluid or similar liquids to start or "freshen up" a fire in this heater. Keep all such liquids well away from the heater while it is in use.

Instruct all members of your family on the safe operation of the heater. Ensure they have enough knowledge of the entire system if they are expected to operate it. Stress the section on chimney fires and the importance of following the steps outlined "In Case of Chimney Fire".

Chimney Smoke and Creosote Formation

When wood is burned slowly, it produces tar and other organic vapours, which combine with expelled moisture to form creosote. The creosote vapours condense in the relatively cool chimney flue of a slow burning fire. As a result, creosote residue accumulates on the flue lining. When ignited, this creosote makes an extremely hot fire. The chimney connector and chimney should be inspected periodically (at least once every two months) during the heating season to determine if a creosote buildup has occurred. If creosote has accumulated (3 mm. or more), it should be removed to reduce the risk of a chimney fire.

1. Highest smoke densities and emissions occur when a large amount of wood is added to a bed of hot coals and the air inlet is closed. The heated wood generates smoke, but without ample air, the smoke cannot burn. Smoke-free, clean burning requires small fuel loads, two or three logs at a time or 1/4 to 1/2 of fuel load and leaving the air inlet relatively wide open, especially during the first 10 to 30 minutes after each loading, when most of the smoke generating reactions are occurring. After 30 minutes or so, the air inlet can be turned down substantially without excessive smoke generation. Wood coals create very little creosote-producing smoke.

2. The cooler the surface over which the wood smoke is passing, the more creosote will be condensed. Wet or green wood contributes significantly to creosote formation as the excess moisture that is boiled off cools the fire, making it difficult for the tars and gases to ignite, thus creating dense smoke and poor combustion. This moisture-laden smoke cools the chimney, compounding the problem by offering the smoke the ideal place to condense.

In summary, a certain amount of creosote is inevitable. Regular inspection and cleaning is the solution. The use of dry, seasoned wood and ample combustion air will help to minimize annoying smoke emissions and creosote buildup.

Chimney Fires

The dangerous side effect of excessive creosote buildup is a chimney fire. This causes much higher than normal temperatures in the chimney and on its exterior surfaces. Temperatures inside the chimney can exceed 2000°F (1100°C). Ignition of nearby or touching combustible material is more likely during a chimney fire. Proper clearances are critical to prevent damage during such a fire.

Chimney fires are easy to detect; they usually involve one or more of the following:

- Flames and sparks shooting out of the top of the chimney
- A roaring sound
- Vibration of the chimney

To Avoid a Chimney Fire

1. Burn wood cleanly. Do not burn wet wood or turn down the unit too quickly after loading.

2. Do not let creosote build up to a point where a chimney fire is possible.

3. Do not have fires in the heater that may ignite chimney fires. These are excessively hot fires, such as when burning household trash, cardboard, Christmas tree limbs, or even ordinary fuel wood; (e.g. with a full load on a hot bed of coals and with the air inlet wide open for more time than is needed to completely char a fresh fuel load.)

4. The Chimney and connector pipe should be inspected /cleaned periodically.

In Case of a Chimney Fire

1. Prepare to evacuate to ensure everyone's safety. Have a well understood plan of action for evacuation. Have a place outside where everyone is to meet.

2. Close air inlet on stove.

3. Call local fire department. Have a fire extinguisher handy. Contact your local municipal or provincial fire authority for further information on how to handle a chimney fire. It is most important that you have a clearly understood plan on how to handle a chimney fire.

4. After the chimney fire is out, the chimney must be cleaned and checked for stress and cracks before starting another fire. Also check combustibles around the chimney and the roof.

- The services of a competent or certified installer, (certified by the Wood Energy Technical Training program (WETT) - in Canada, Hearth Education Foundation (HEARTH) - in U.S.A.,) are strongly recommended.

Curing of the Paint Finish

To achieve the best finish, the paint on your stove must be baked on. When burning your stove for the first 2-3 times it is very important that the room be well ventilated. Open all windows and doors. Smoke and fumes caused by the curing process may cause discomfort to some individuals.

WARNING: Never use chemicals or any other volatile liquid to start a fire. Do not burn garbage, or flammable fluids such as gasoline, naptha, or engine oil.

Operation

CAUTION: Hot while in operation. Keep children, clothing and furniture away. Contact may cause skin burns.

WARNING: Always keep loading door closed when burning. This heater is not designed for open door burning.

WARNING: No alteration or modification of the combustion air control assembly is permitted. Any tampering will void warranty and could be very hazardous.

WARNING: Do not use grates or andirons to elevate the fuel. Burn directly on the fire bricks. Replace broken or missing bricks. Failure to do so may create a hazardous condition.

Wood Selection

This heater is designed to burn natural wood only. Higher efficiency and lower emissions generally result when burning air-dried seasoned hardwoods, as compared to softwoods or to green or freshly cut hardwoods.

Wood should be properly air dried (seasoned) for six months or more. Wet or undried wood will cause the fire to smoulder and produce large amounts of smoke and creosote. Wet wood also produces very little heat and tends to go out often. Wood should be stored under cover away from open flame or heat sources.

DO NOT BURN :

• Salt water wood *	• Treated wood
• Wet or green wood	• Coal/charcoal
• Garbage*	• Solvents
• Lawn clippings/yard waste	• Unseasoned wood
• Railroad ties	• Manure or animal remains
• Materials containing rubber, including tires	• Materials containing plastic
• Construction or demolition debris	• Materials containing asbestos
• Waste petroleum products, paints, paint thinners, or asphalt products	• Paper products, cardboard, plywood, or particleboard.

*** These materials contain chlorides which will rapidly destroy metal surfaces and void warranty.**

Burning these materials may result in the release of toxic fumes or render the heater ineffective and cause smoke.

Do not burn anything but wood. Other fuels, e.g. Charcoal, can produce large amounts of carbon monoxide, a tasteless, odourless gas that can kill. Under no circumstances should you attempt to barbecue in this heater.

The prohibition against burning these materials does not prohibit the use of fire starters made from paper, cardboard, saw dust, wax and similar substances for the purpose of starting a fire in an affected wood heater.

How to Test Your Wood

Add a large piece of wood to the stove when it has a good large bed of coals. It is dry if it is burning on more than one side within one minute. It is damp if it turns black and lights within three minutes. If it sizzles, hisses and blackens without igniting in five minutes it is too wet and should not be burnt

Lighting a fire

WARNING: Never use chemicals or any other volatile liquid to start a fire.

1. Adjust air control to “High” position (all the way to the left) and open door.

2. Place crumpled newspaper in the centre of the heater and crisscross with several pieces of dry kindling. Add a few small pieces of dry wood on top.

3. Ignite the paper and leave the door ajar approximately 1/2"(13mm) - 1"(25mm) until the wood kindling is fully engulfed in flame.

4. After the kindling is fully engulfed add a few small logs. Close door.

5. Begin normal operation after a good coal base exists and wood has charred.

Normal Operation

WARNING: This wood heater has a manufacturer-set minimum low burn rate that must not be altered. It is against federal regulations to alter this setting or otherwise operate this wood heater in a manner inconsistent with the operating instructions in this manual.

1. Set air control to a desired setting. If smoke pours down across the glass (waterfall effect) this indicates you have shut the control down too soon or you are using too low a setting. The wide range control panel makes finding the desired setting for your application easy. As every home's heating needs vary (i.e. Insulation, windows, climate, etc.) The proper setting can only be found by trial and error and should be noted for future burns.

2. To refuel, adjust air control to high, and give the fire time to brighten. Open the door slowly, this will prevent back puffing.

3. Use wood of different shape, diameter and length (up to 18"(457mm)). Load your wood endwise and try to place the logs so that the air can flow between them. Always use dry wood.

4. Do not load fuel to a height or in such a manner that would be hazardous when opening the door.

5. For extended or overnight burns, unsplit logs are preferred. Remember to char the wood completely on maximum setting before adjusting air control for overnight burn.

- Burn wood only, dry and well seasoned. The denser or heavier the wood when dry, the greater its heat value. This is why hardwoods are generally preferred. Green or wet wood will cause a rapid buildup of creosote. If you feel it is necessary to burn wet or unseasoned wood, do so only with the air inlet set open enough to maintain a good strong fire and fairly high chimney temperatures. Do not attempt to burn overnight using green wood or wet wood. Wet wood can cause up to 25% drop in heater output, as well as contributing significantly to creosote buildup.

DO NOT OVER FIRE THIS HEATER: Attempts to achieve heat output rates that exceed heater design specifications can result in permanent damage to the heater and chimney. A glowing red, top or vent pipe are indications of over firing. Failure to rectify an over firing condition can be hazardous and may void the manufacturer's warranty.

Restarting After Extended or Overnight Burns

1. Open door and rake hot embers towards the front of the heater. Add a couple of dry, split logs on top of embers, close door.

2. Adjust air control to high and in just a few minutes, logs should begin burning.

3. After wood has charred, reset air control to desired setting.

4. To achieve maximum firing rate, set control to high "H". Do not use this setting other than for starting or preheating fresh fuel loads.

Proper Draft

1. Draft is the force which moves air from the appliance up through the chimney. The amount of draft in your chimney depends on the length of the chimney, local geography, nearby obstructions and other factors.

2. Too much draft may cause excessive temperatures in the appliance. An uncontrollable burn or a glowing red stove part or chimney indicates excessive draft.

3. Inadequate draft may cause back puffing into the room and plugging of the chimney. Smoke leaking into the room through appliance and chimney connector joints indicates inadequate draft.

Remember the correct air inlet setting is affected by variables such as type of wood, outside temperature, chimney size and weather conditions.

Ash Removal

Caution: Ashes are to be removed only when the heater is cold. Whenever ashes get 3"(76mm) to 4"(102mm) deep in your firebox, and when fire has burned down and cooled, remove excess ashes. Leave an ash bed approximately 1" (25 mm) deep on the firebox bottom to help maintain a hot charcoal bed.

Ash Cleanout system (optional):

The ash dump handle is located under the ash lip on the left hand side. To operate ash dump, pull handle out 1/2"(13mm) and turn clockwise. This will unlock the ash dump and allow it to open. Hold handle open while pulling ashes into the opening. Avoid large embers as these still contain heat value. Release handle and push in to lock. Ensure ash dump door is properly engaged. Fill the cavity with the remaining ash level with the firebox floor. Lift and pull out ash pan and discard ashes into metal container. Replace ash pan and ensure it is seated properly.

Do not burn with ash dump door open. Doing so will create a hazardous condition. Always leave about 1"(25mm) of ash when cleaning.

Disposal of Ashes

Ashes should be placed in a metal container with a tight fitting lid. The closed container of ashes should be placed on a non-combustible floor or on the ground, well away from all combustible materials, pending final disposal. If the ashes are disposed of by burial in soil or otherwise locally dispersed, they should be retained in closed container until all cinders have thoroughly cooled. Other waste should not be placed in this container.

Maintenance

WARNING: Never use chemicals or any other volatile liquid to start a fire. Do not burn garbage, or flammable fluids such as gasoline, naptha, or engine oil.

WARNING: ONLY USE MATERIALS SUPPLIED BY MANUFACTURER WHEN DOING MAINTENANCE OR REPLACEMENTS.

1. If glass becomes darkened through slow burning or poor wood, it can readily be cleaned with fireplace glass cleaner when stove is cold. Never scrape with an object that might scratch the glass. The type and amount of deposit on the glass is a good indication of the flue pipe and chimney buildup. A light brown dusty deposit that is easily wiped off usually indicates good combustion and dry, well-seasoned wood and therefore relatively clean pipes and chimney. On the other hand, a black greasy deposit that is difficult to remove is a result of wet and green wood and too slow a burning rate. This heavy deposit is building up at least as quickly in the chimney.

2. DOOR GASKETS - The gasket used by Pacific Energy (7/8"(22mm) medium density fiberglass rope) requires only light pressure to seal. This will prolong seal life. It is important that the door seal be maintained in good condition. Periodically inspect seals and replace if necessary. Follow the instructions included in the kit (prt# 80000156), obtainable from your nearest Pacific Energy dealer.

3. DOOR GLASS - Do not slam loading door or otherwise impact glass. When closing door, make sure that no logs protrude to impact the glass. If the glass gets cracked or broken, it must be replaced before using the stove. Replacement glass can be obtained from your dealer. Use 8-13/16"(224mm) x 15-1/4"(387mm) x 5 mm. Ceramic glass only. **Do not substitute with any other type.**

- To remove broken glass, undo the four retaining screws and remove clamps and frame, noting position for re-assembly. Remove all particles of glass . Be careful as they are very sharp. Install new glass complete with gasket. Replace frame, clamps and screws.

CAUTION:

- Do not overtighten, tighten screws very carefully
- Do not clean glass when hot
- Do not use abrasive cleaners on glass

4. The area where boost combustion air enters the firebox must be kept clear of excessive ash buildup which will block air flow. This area is at the front of the firebox.

5. Do not store wood within heater installation clearances, or within the space required for fuel loading and ash removal. Keep the area around the heater clean and free of loose combustibles, furniture, newspapers, etc.

6. If the plated door requires cleaning, use mild soap and water only. Use of abrasive cleaners will void warranty.

7. Establish a routine for the fuel, wood burning and firing technique. Check daily for creosote buildup until experience shows how often you need to clean to be safe.

8. Be aware that the hotter the fire, the less creosote is deposited. Weekly cleaning may be necessary in mild weather, even though monthly cleaning is usually enough in the coldest months when burning rates are higher. When wood is burned slowly, it produces tar and other organic vapours, which combine with expelled

Maintenance Checks

Check the following parts for damage such as cracks, excessive corrosion, burned out sections and excessive warping: (See website for descriptions and more detail)

Weekly:

- Firebrick - Visual, for cracking.
- Door Gasket - sagging, placement, damage.

Monthly

- Brick rail tabs and brick rails.
- Air riser tube in the back of the firebox.
- Back side of airwash chamber.
- Baffle locking pin.
- Boost tube cover.

When Cleaning the Chimney System:

- Top baffle board/blanket.
- Baffle.
- Top heat shield and mounting bolt.
- Baffle Gasket.
- Brick Rails.
- Manifold.

Blower:

- The blower should be cleaned out a minimum every six months by using a vacuum on the grill openings in the back and bottom of the blower casing to remove any dust and debris.

Baffle:

- Some warping of the baffle is normal(up to 1/4” or .65cm). Replace if the baffle has permanent warping greater than this or has cracking or breakage.
- Please contact your Dealer if you experience any of the damage listed above. Continuing to operate your stove with broken parts can accelerate damage to other parts and may void your warranty

Baffle Removal

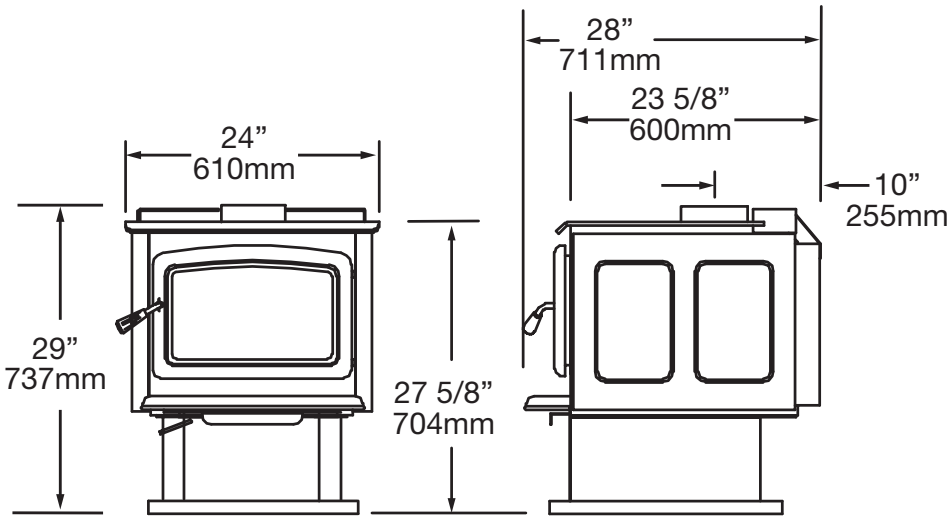
Chimney connector pipe should be disconnected from stove to clean and inspect. Only if this is not possible should you remove baffle assembly.

DO NOT OPERATE WITH BAFFLE ASSEMBLY OR INSULATION REMOVED.

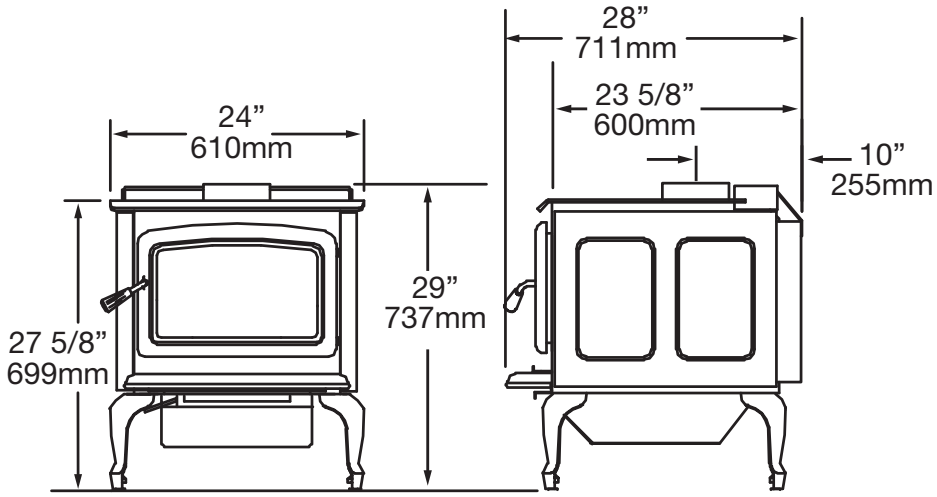
Removal

Remove retaining pin at the back top of the firebox, just under the baffle. Lift baffle up and pull forward to disconnect from the supply tube. Tilt baffle sideways to drop down and remove from firebox. Inspect gasket between baffle and supply tube. If necessary, replace with gasket (prt#80000365) available from your Pacific Energy dealer. Re-install baffle assembly in reverse order. The two side pieces of insulation must be tight against the side rails.

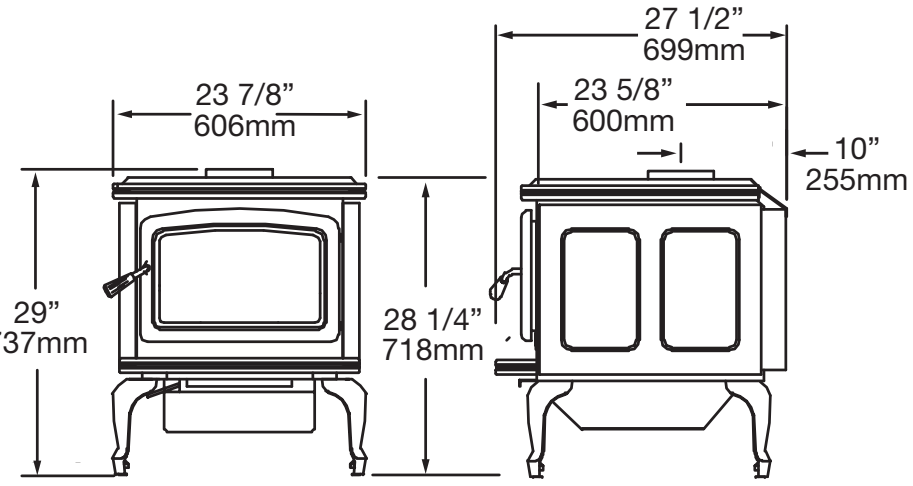
Dimensions



SUPER LE- Pedestal



SUPER LE- Leg



SUPER Classic LE

Figure 1: Super LE dimensions

Crate Removal

1. Carefully remove the crate top and supports.
2. Remove plastic cover.

Assembly - Legs (Leg Model)

1. Loosen the four bolts holding the Leg Adapter to the firebox bottom.
2. Insert the legs between the Leg Adapter flange and the washers.
3. Using the guides cast into the tops of the leg, align the guides into the notches in the Ash Box mounting flanges.
4. Tighten the bolts down.

Assembly - Optional Ash Cleanout

Pedestal Model

1. Remove the Ash Drawer Front Cover Plate by removing the center screw(1) and lifting up to dis-engage the bottom tab.
2. Remove the Knock-out in the top left corner of the opening
3. Install the Ash Dump mechanism, following the instructions on the next page.
4. Install the new Ash Pan into the Pedestal.

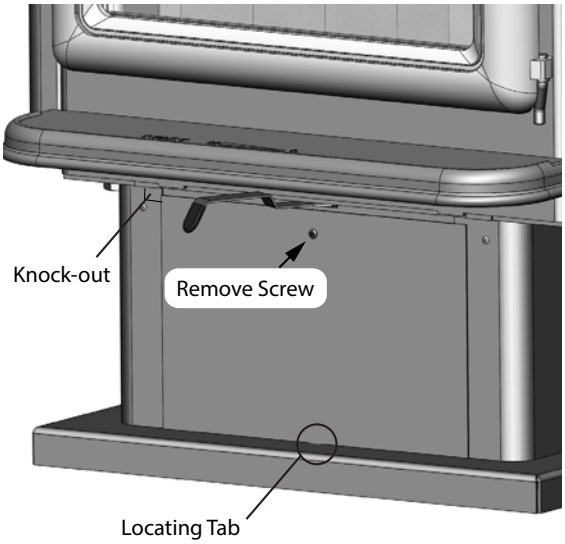


Figure 2: Ped Cover removal.

Leg Model

1. Remove the two screws holding the Leg Ash Box front cover (located on either side). Remove the cover
2. Remove the Knock-out in the top left corner of the opening
3. Install the Ash Dump mechanism, following the instructions.
4. Install the new Ash Pan into the Leg Ash Box.

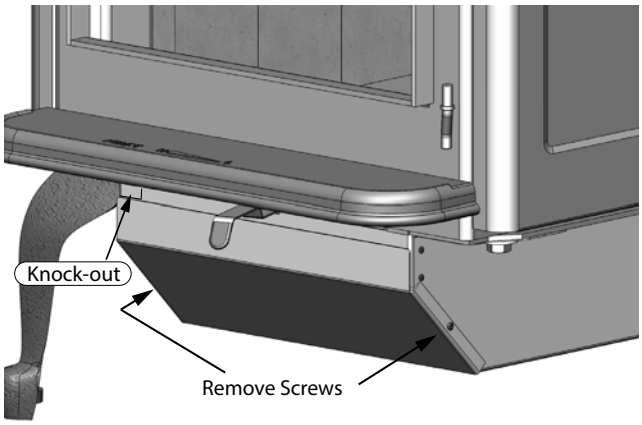

Figure 3: Leg Ash Cover removal.

Ash Dump Installation

1. Remove the Ash Cleanout hole cover plate and gasket, located under the stove. Discard the cover plate.

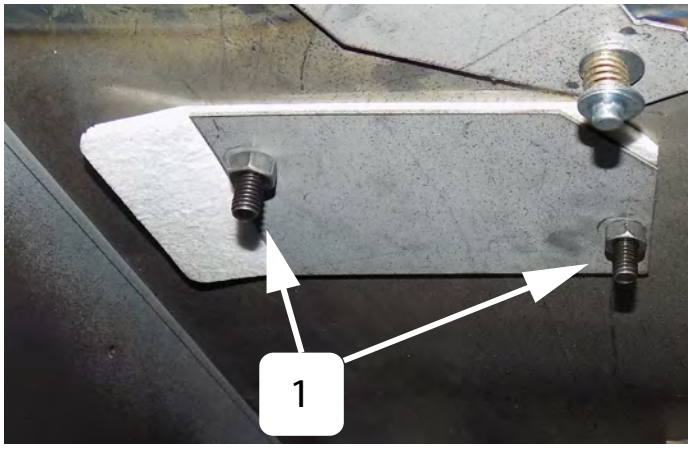

Figure 4: Cover Plate removal

2. Place the provided gasket around the upper tube portion of the new Ash Dump mechanism, as per the picture.

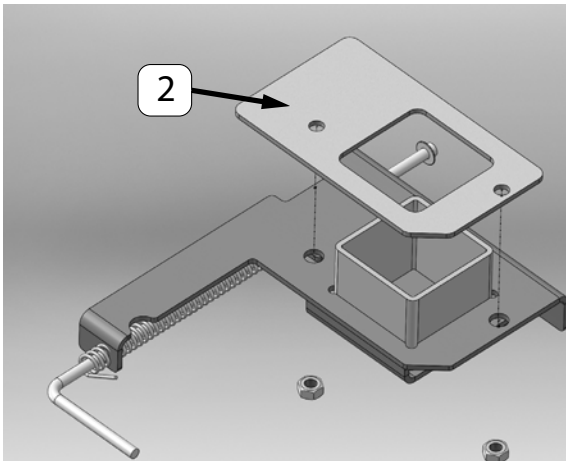

Figure 5: Ash Cleanout Gasket.

3. Insert The Ash Dump mechanism with gasket from underneath the firebox bottom up into the open hole and over the two bolts hanging down. - The release handle should be facing forward and on the left side, inserted in the slot located in the Pedestal or Leg adapter.

4. Re-attach the nuts onto the cairrage bolts. And tighten to gently compress the gasket.

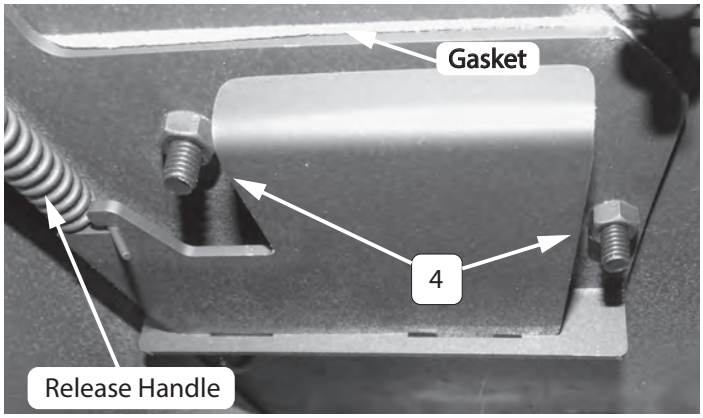

Figure 6: Under side of bolted ash Cleanout.

Floor Protector

The stove may be installed on a combustible floor provided noncombustible Ember protection is used. This protection must extend as follows:

In USA: 16" (406 mm) to the front and 8" (203 mm) to the sides of the fuel loading door opening. See Figure #7, below. This protection is also required under the chimney connector and 2" (51 mm) beyond each side.

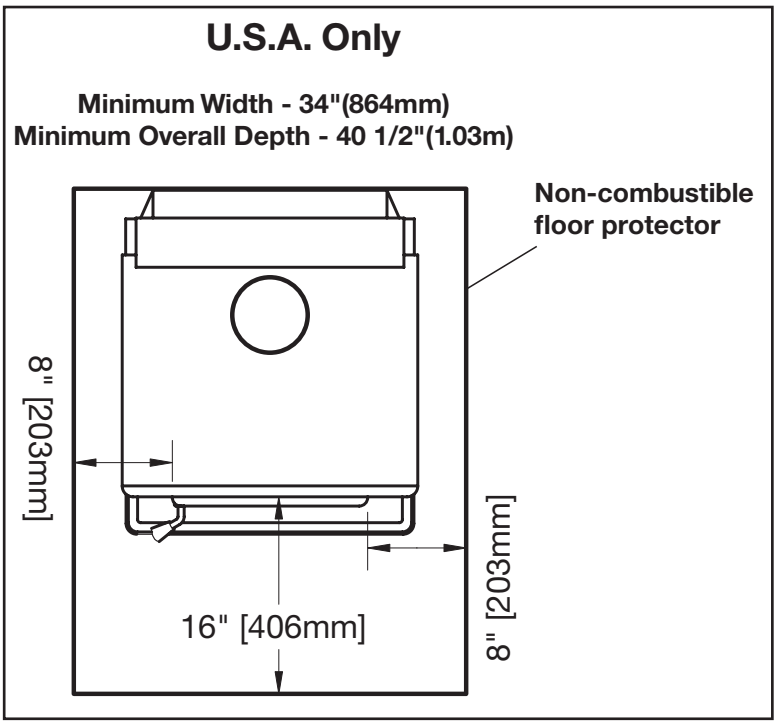

Figure 7: Floor protector - USA only.

In Canada: 18" (457 mm) on the firing side and 8" (203 mm) to the other sides.

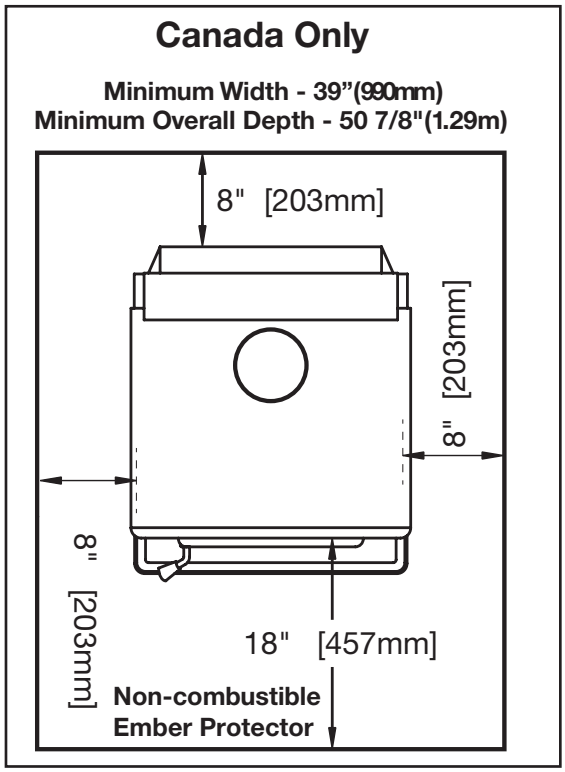

Figure 8: Floor protector - Canada only.

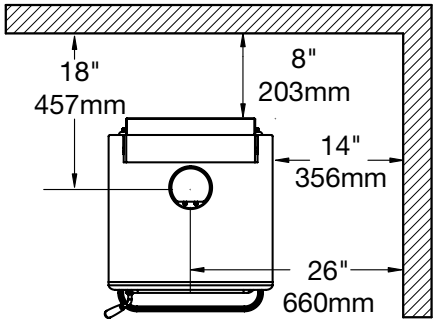
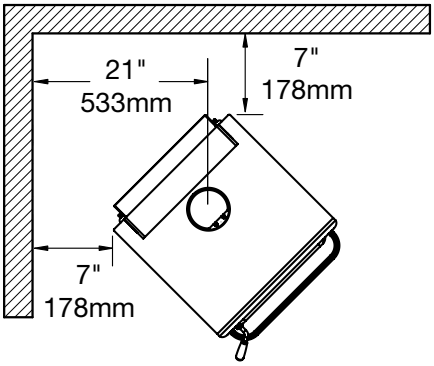
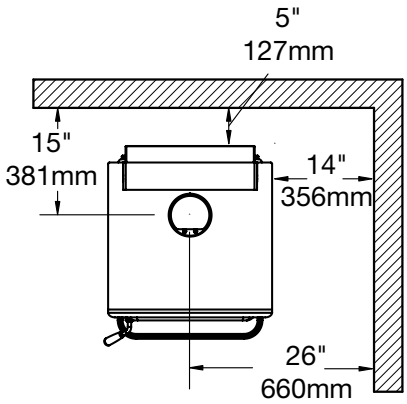
Clearances:

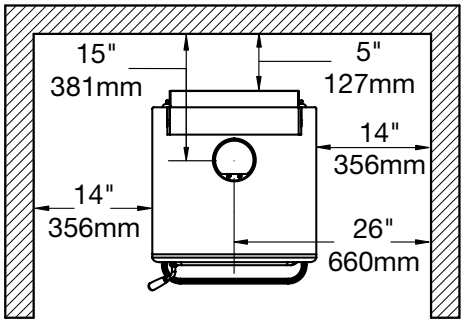
Single Wall Connector - Residential

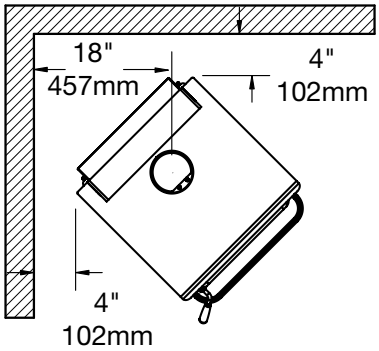




Double Wall Connector - Residential







Alcove: Min. Height 7' (2.13m)
Max. Depth 3' (915mm)

Clearances may be reduced with various heat shielding/insulating materials. Consult CSA B365 or NFPA 211 and local fire codes and authorities for approval. For close clearances, use a listed double-wall connector.

NOTE: local/national codes or regulations may override some guidelines in this manual

We recommend that our products be installed and/or serviced by professionals who are certified by a "Qualified agency";

NFI (National Fireplace Institute®) in the United States,
CSIA (Chimney Safety Institute of America) in the United States and Canada,
WETT (Wood Energy Technology Transfer) in Canada or
APC (Association des Professionnels du Chauffage) in Quebec

We endorse NFI NATIONAL FIREPLACE INSTITUTE

Wood Energy Technical Training www.wettinc.ca

Warning: Under no circumstances is this heater to be installed in a makeshift or "temporary" manner. It may be fired only after the following conditions have been met.

DO NOT ATTEMPT TO CONNECT THIS HEATER TO ANY AIR DISTRIBUTION DUCT.

Outside combustion air or fresh air into the room may be required in your area, consult local building codes (see Combustion Air section).

Chimney and Connector

- The chimney system must be a ULC-S629 or UL-130HT listed Stainless chimney or a Masonry chimney suitable for use with solid fuel, that is lined, in good condition and meets fire and building codes.
- The chimney flue size should be the same as the stove outlet (6 inches) for optimal performance. Reducing or increasing the flue size may adversely affect stove performance.
- Chimney flue exit is to be 3 feet (1 m.) above roof and two feet (0.6 m.) above highest projection within 10 feet (3 m.) horizontally.
- The installation must meet all local codes.
- Do not connect this unit to a chimney flue serving another appliance. Minimum system height is 15 feet (4.6 m.) (measured from base of appliance).

BOTH CHIMNEY SYSTEM AND CONNECTOR MUST BE LISTED TO:
IN CANADA - ULC S-641 LISTED for double wall connector and ULC-S629 LISTED CHIMNEY,
IN USA - UL-103 HT LISTED CONNECTOR AND CHIMNEY

When using a Double-Wall Connector

- Use a listed double-wall connector.
- If a listed chimney and double-wall connector are to be connected to the stove, install all components as per the chimney/connector manufacturer's installation requirements.

When using a Single-Wall (smoke pipe) Connector

The single wall pipe section must be:

- If you are using smoke pipe/chimney connector in conjunction with the listed chimney system, consult local/national fire or building codes for connector installation. Follow the chimney manufacturer's complete instructions for the installation of the chimney system.
- As short and straight as possible, use six inch diameter, 24 gauge black pipe that is clean and in new condition.
- Installed with the crimped or male ends pointing down. (This will carry any liquid creosote or condensation back into the stove) and secured at every joint and collar with 3 sheet metal screws.
- The chimney connector shall not pass through an attic, roof space, closet or similar concealed space, floor, or ceiling. Where passage through a wall, or partition of combustible material is desired, the installation shall conform to CAN/CSA-B365, Installation Code for Solid-Fuel-Burning Appliances and Equipment or NFPA 211 Standard for Chimneys, Fireplaces, Vents and Solid-Fuel Burning Appliances.

Installation Procedure

1. Select the position for your wood stove based on the clearances diagram. Position the floor protection and stove.

2. Mark the position for the hole in the ceiling and roof by using a string and plumb-bob hanging over the exact center of the stoves flue pipe.

3. Check that the intended location will not interfere with floor joists, ceiling joists or rafters before proceeding further. Adjust if necessary and reconfirm the clearance's from the stove to combustibles.

4. Carefully follow the directions of the listed chimney for installation of the chimney system from the ceiling through to the rain cap. This may include framing in holes etc.

5. Start installing smoke pipe / chimney connector, slip the crimped edge of the pipe inside the stove collar. Use holes provided in collar to secure pipe with two screws.

6. Install the remaining lengths of pipe one on top of the other up to the finished height of the chimney and using the manufacturers approved adapter, secure to each other. A slip section can make this easier.

Combustion Air

Intake or combustion air can be supplied to the stove in one of two ways. Consult your local building code or CAN/CSA-B365, Installation Code for Solid-Fuel-Burning Appliances and Equipment before proceeding.

Outside air supply - (Necessary for mobile home installation, optional for residential installation.)

To draw **outside air through the floor** - This hole must get its air from a ventilated crawl space or be extended with duct to the outdoors (see Figure #9, Page 18). The use of outside combustion air for residential installation requires the unit to be secured to the structure to prevent dislodging of the air duct.

- **Leg Model:** Cut or drill a hole in the floor, (large enough to fit 4" metal flex venting) behind the ash box enclosure. Once the stove is in place, attach the 4" Intake Starter to the Ash Box Enclosure. Connect to the floor with the 4"(100mm) i.d. metal flex pipe.
- **Pedestal Model:** Cut or drill a 4" (100mm) diameter hole in the floor anywhere inside the perimeter of the pedestal base. Cover the hole with a 4" x 4" (100 mm x 100 mm) rodent screen and staple/nail in place. Leave the cover over the hole on the back of the Pedestal. Place the stove over the hole.

To draw **outside air from behind the stove**, Use a 4"(100mm) Air intake. Cut or drill the recommended size hole through a wall behind the unit.

- Install the 4" Intake Starter over the hole in the rear of the Ash Box enclosure. Attach metal flex between the starter and the Air Intake.
- Pedestal Model: Remove the cover plate from the rear of the pedestal and install the cover plate over the hole located under the Pedestal. Install the 4" Intake Starter over the hole in the rear. Attach metal flex between the starter and the wall inlet.

Room air supply - The stove will draw its air from the room through the opening in the Ash Box Enclosure and into the firebox intake.

Note: The living space around the heater must be well ventilated with good air circulation. Anything that may cause a negative pressure can cause gases or fumes to be pulled into the living area. During extremely cold weather, and especially when burning at very slow rates, the upper parts of the exposed chimney may ice up, partially blocking the flue gases. If blockage occurs, flue gases may enter the living space.

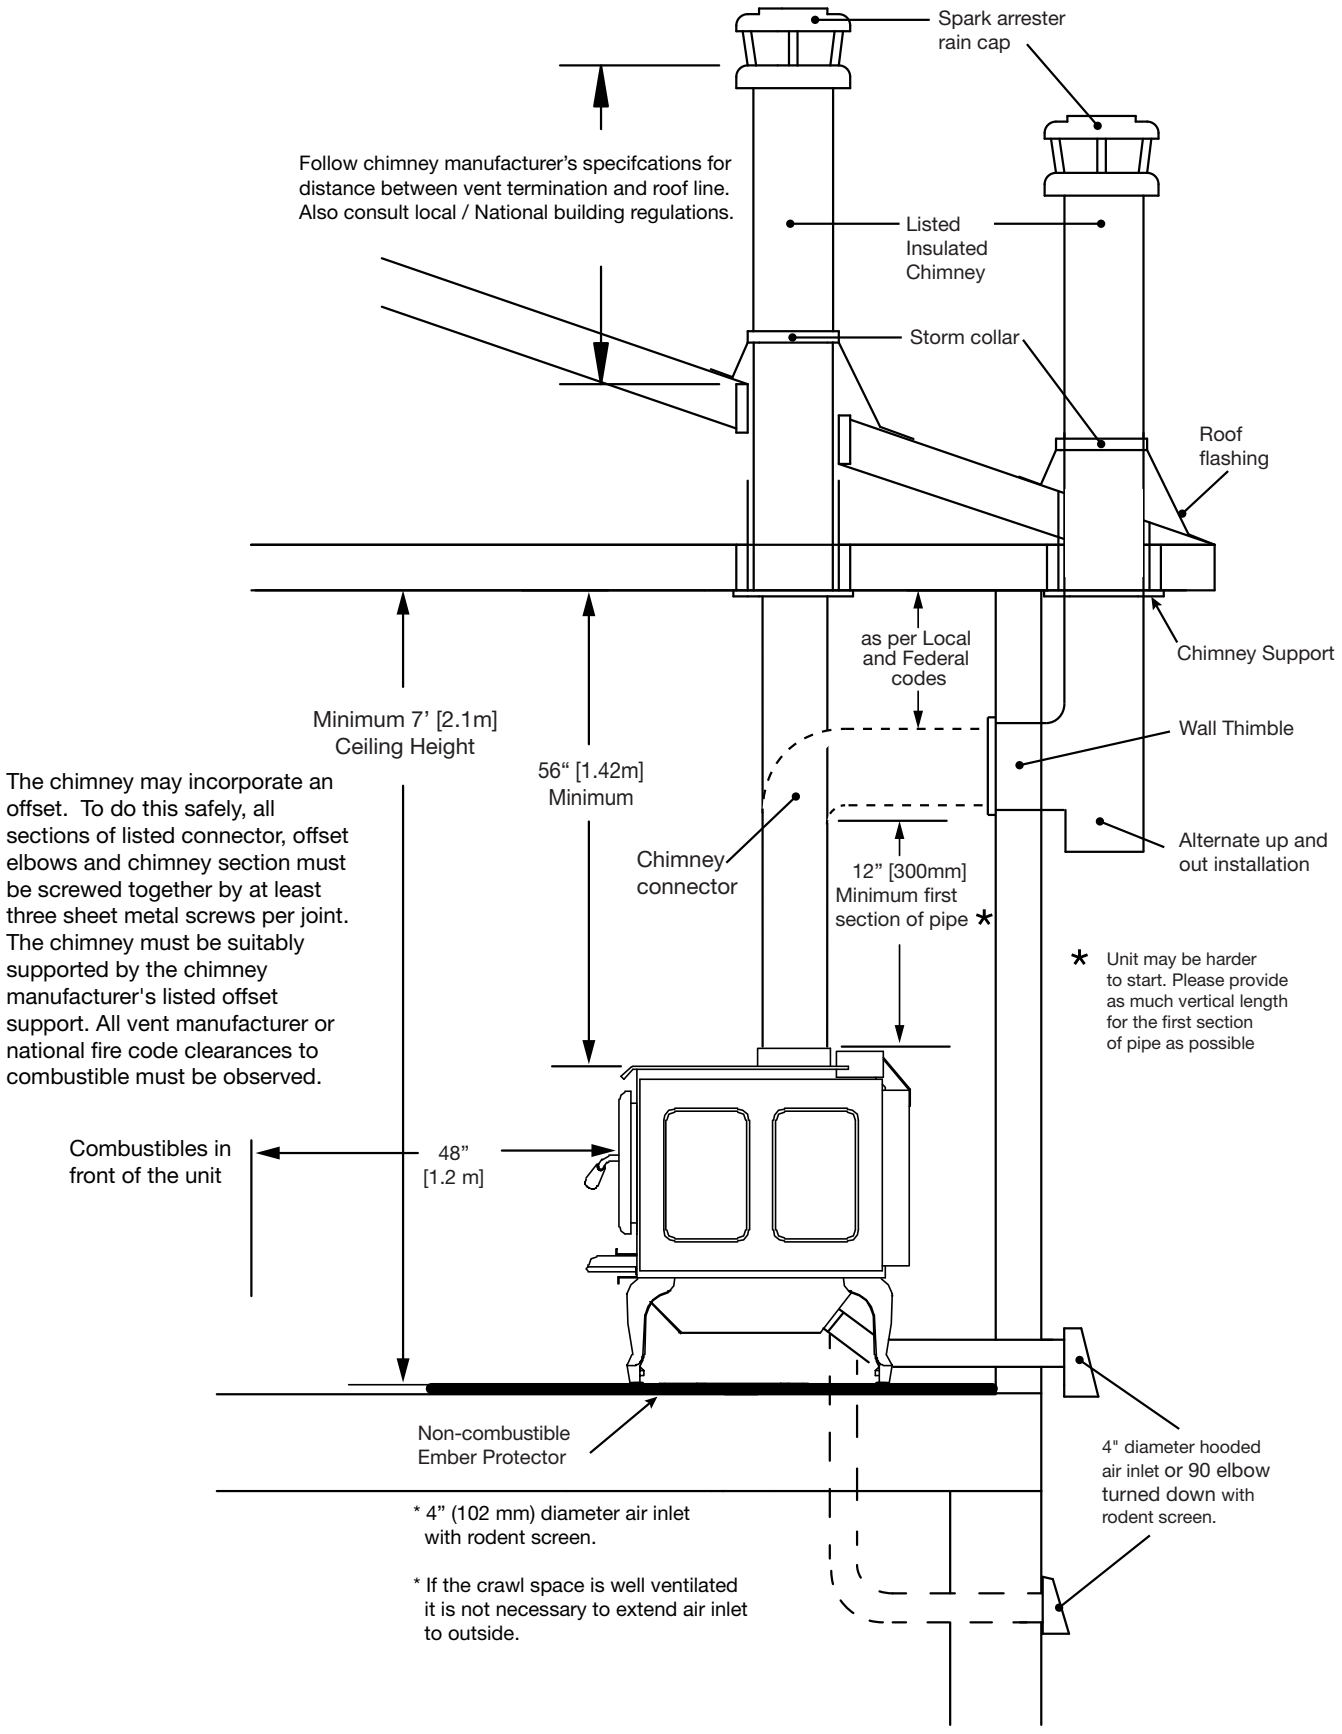


Figure 9: Super LE residential venting.

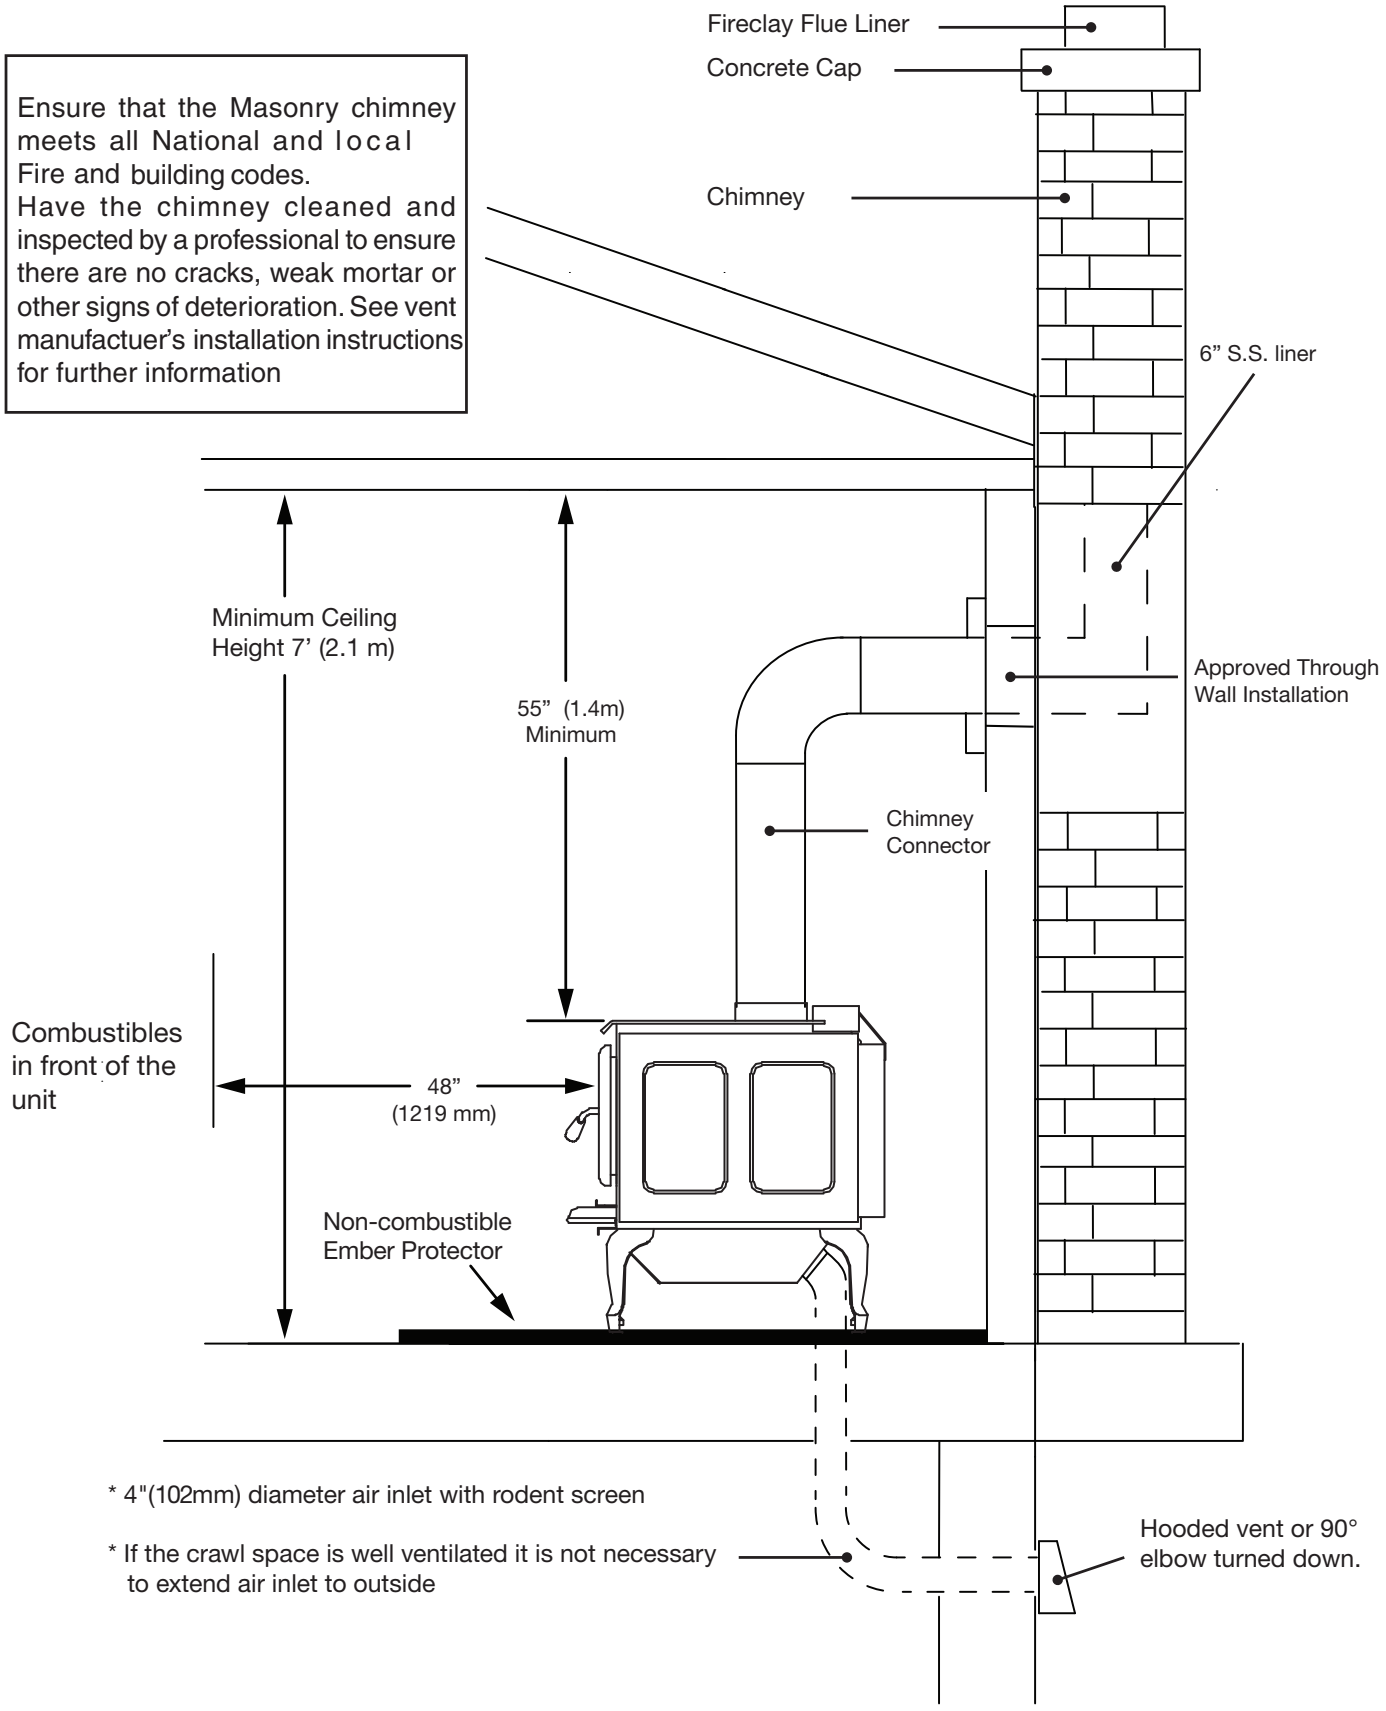

Figure 10: Super LE Venting to a masonry chimney.

Through Wall Installations (as per NFPA 211-2013)

ATTENTION: VAPOUR BARRIER MUST BE MAINTAINED WHEREVER CHIMNEY OR OTHER COMPONENTS PENETRATE TO THE EXTERIOR OF THE STRUCTURE. SEE LOCAL BUILDING CODES FOR PROPER AND APPROVED METHODS OF MAINTAINING VAPOUR BARRIER.

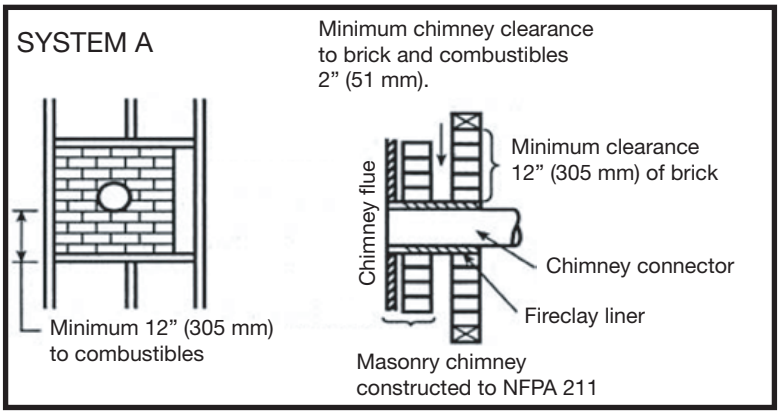

Figure 11: System A.ai

Minimum Clearance 12 in. (305mm) to combustibles

System A. Minimum 3.5 in. (90 mm) thick brick masonry wall framed into combustible wall with a minimum of 12 in. (305 mm) brick separation from clay liner to combustibles. Fireclay liner (ASTM C 315, Standard Specifications for Clay Fire Linings, or equivalent), minimum 5/8 in. (16 mm) wall thickness, shall run from outer surface of brick wall to, but not beyond, the inner surface of chimney flue liner and shall be firmly cemented in place.

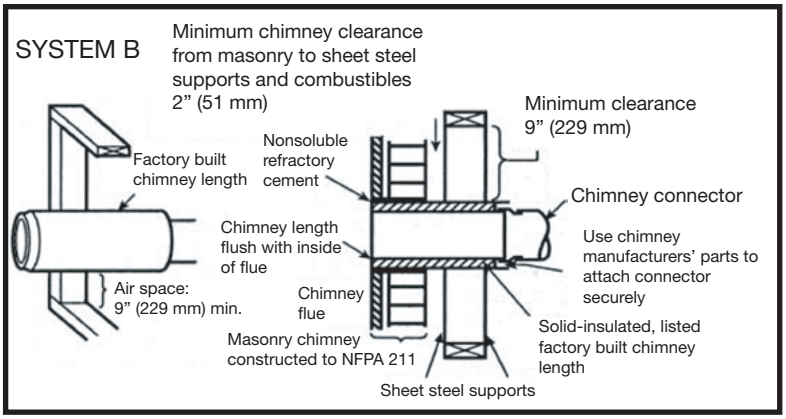

Figure 12: System B.ai

Minimum Clearance 9 in. (229mm) to combustibles

System B. Solid-Insulated, listed factory-built chimney length of the same inside diameter as the chimney connector and having 1 in. (25.4 mm) or more of insulation with a minimum 9 in. (229 mm) air space between the outer wall of the chimney length and combustibles.

The inner end of the chimney length shall be flush with the inside of the masonry chimney flue and shall be sealed to the flue and to the brick masonry penetration with non-water-soluble refractory cement. Supports shall be securely fastened to wall surfaces on all sides.

Fasteners between supports and the chimney length shall not penetrate the chimney liner.

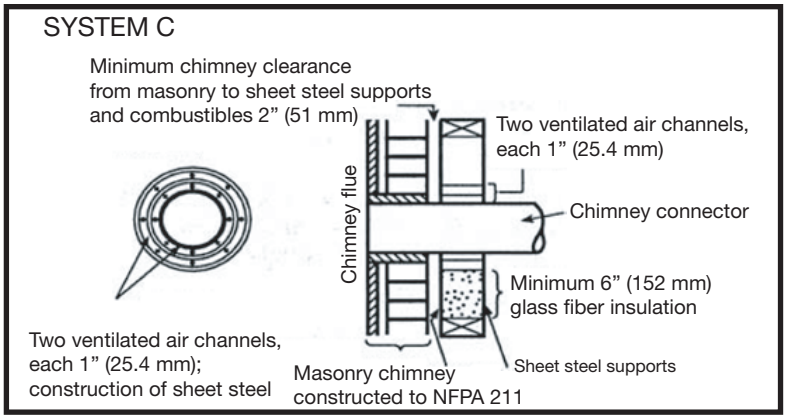

Figure 13: System C.ai

Minimum Clearance: 6 in. (152mm) to combustibles

System C. Sheet steel chimney connector, minimum 24 gauge [0.024 in. (0.61 mm)] in thickness, with a ventilated thimble, minimum 24 gauge [0.024 in. (0.61 mm)] in thickness, having two 1 in. (25.4 mm) air channels, separated from combustibles by a minimum of 6 in. (152 mm) of glass fiber insulation. Opening shall be covered, and thimble supported with a sheet steel support, minimum 24 gauge [0.024 in. (0.61 mm))] in thickness.

Supports shall be securely fastened to wall surfaces on all sides and shall be sized to fit and hold chimney section. Fasteners used to secure chimney section shall not penetrate chimney flue liner.

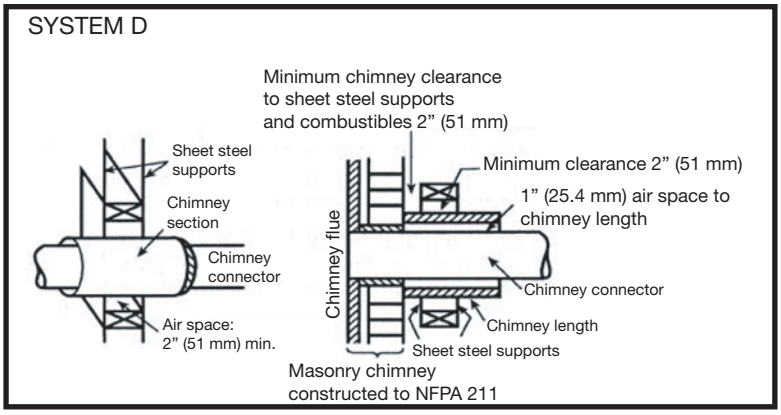

Figure 14: System D.ai

Minimum Clearance: 2 in. (51mm) to combustibles

System D. Solid-Insulated, listed factory-built chimney length with an inside diameter 2 in. (51 mm) larger than the chimney connector and having 1 in. (25.4mm) or more of insulation, serving as a pass-through for a single-wall sheet steel chimney connector of minimum 24 gauge [0.024 in. (0.61 mm)] thickness, with a minimum 2 in. (51 mm) air space between the outer wall of chimney section and combustibles.

Minimum length of chimney section shall be 12 in. (305 mm). Chimney section concentric with and spaced 1 in. (25.4 mm) away from connector by means of sheet steel support plates on both ends of chimney section. Opening shall be covered, and chimney section supported on both sides with sheet steel supports of minimum 24 gauge [0.024 in. (0.61 mm)] thickness.

Supports shall be securely fastened to wall surfaces on all sides and shall be sized to fit and hold chimney section. Fasteners used to secure chimney section shall not penetrate chimney flue liner.

Mobile Home Installation

Warning: Under no circumstances is this heater to be installed in a makeshift or "temporary" manner. It may be fired only after the following conditions have been met.

- **DO NOT CONNECT THIS UNIT TO A CHIMNEY FLUE SERVING ANOTHER APPLIANCE.**
- **DO NOT INSTALL IN A SLEEPING ROOM.**
- **CAUTION: THE STRUCTURAL INTEGRITY OF THE MOBILE HOME FLOOR, WALL AND CEILING/ ROOF MUST BE MAINTAINED.**
- Attach the stove to the floor using two 1/4" x 2" or longer lag screws through holes in the legs or the Pedestal base.
- Outside combustion air supply must be used for Mobile Home installations - see .pg.17
- The services of a competent or certified installer, (certified by the Wood Energy Technical Training program (WETT) - in Canada, Hearth Education Foundation (HEARTH) - in U.S.A.,) are strongly recommended.

Clearances

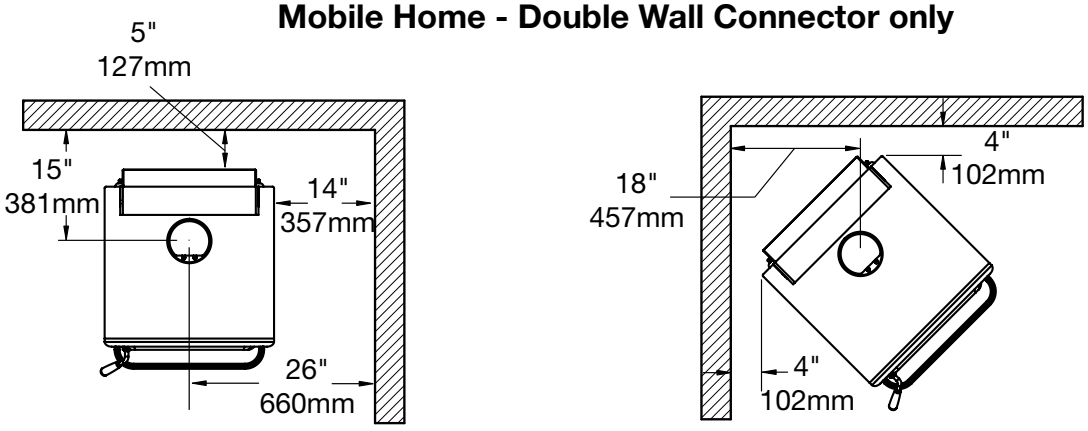
This heater must be installed with listed double-wall connector and compatible ULC-S629 or UL-103HT listed chimney system.

Clearances to combustible surfaces and materials are shown. See picture below.

Consult local fire codes and authorities for approval.

NOTE: Install all components to the connector or chimney manufacturer's installation requirements. Consult your chimney supplier/manufacturer for installation advice.

Mobile Home - Double Wall Connector only



Optional Blower

The optional blower kit (Part #: 11140001) is equipped with a three prong power cord and may be installed at any time. Follow the installation instructions supplied with the kit. Route power supply cord away from heater.

Electrical rating: 115 volts AC-1.02 amps.
Fan output rating: 140 CFM

Blower Operation

Proper blower speed matched with air control setting will ensure peak performance from your stove. Operate as follows:

- Air control set to "L" (low), operate blower speed control on "Low".
- Air control set between "L" and "H" (low and high), operate blower speed control at desired setting.

Automatic: To operate the blower automatically, set the rocker switch on the side of the fan housing to "Auto" and set the speed control to your desired setting. This will allow the fan to turn on as the stove heats up to operating temperature. It will also shut the blower off after the fire has gone out and the unit has cooled to below a useful heat output range.

Manual: To manually operate the blower, set the rocker switch to "Man" and set the speed control to your desired setting. This will bypass the temperature sensing device and allow full control of the blower. Switching from "Auto" to "Man" or selecting speed may be done anytime.
Note: The Blower will not shut off until it is manually turned off.

Firebrick Installation

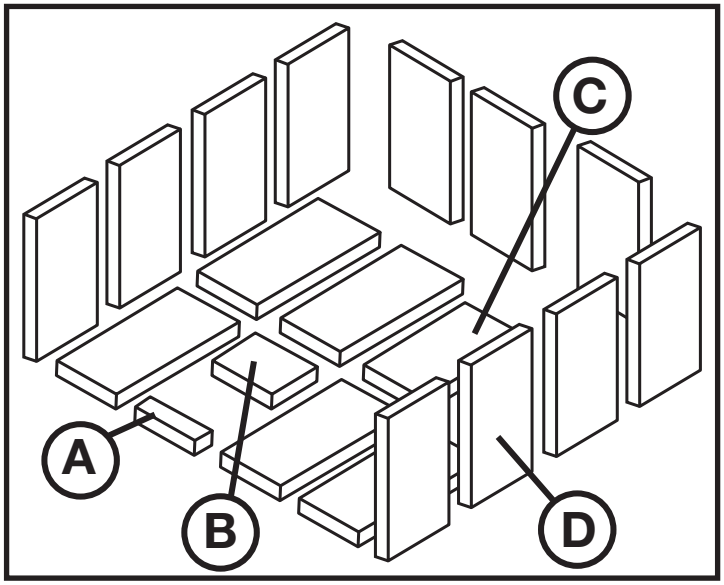


Figure 15: Brick lay out.

ITEM	DIMENSIONS
A	1 1/2” X 4 1/2” X 1 1/4”
B	4” X 4 1/2” X 1 1/4”
C	7 1/4” X 4 1/2” X 1 1/4”
D	9” X 4 1/2” X 1 1/4”

Firebrick Installation Con't

1. Install the floor firebricks; For units **without an Ash Dump** use full size "D" bricks See "Figure 19: Floor layout without ash dump." on page 24. For unit **with the Ash Dump** installed, 2 small bricks ("A & B" in Fig 20) will be used on either end of the ash dump in addition to the regular sized "D" bricks used in the rest of the installation.

There is one exception. Brick "C" is a shorter brick than the "D" bricks. Brick"C" fits up against the Baffle Tube on the rear wall of the firebox and is used in units with or without an ash dump.

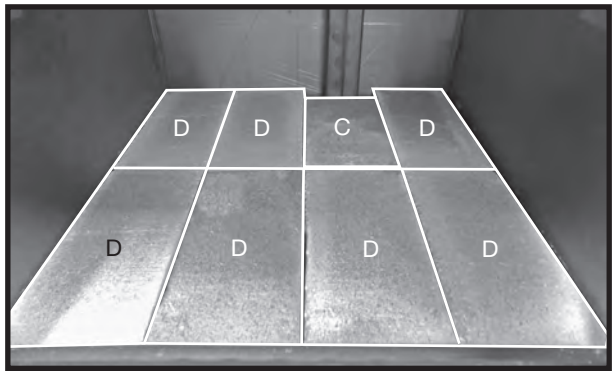

Figure 19: Floor layout without ash dump.

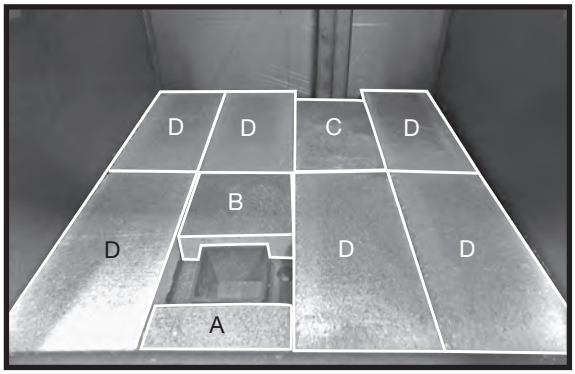

Figure 20: Firebricks on floor .

2. The firebricks for the side walls are next. The sides use "D" bricks. The bricks will stand on top of the floor bricks and will stand on their ends. They will be held in place by two tabs per wall. Install the end bricks first followed by the two center bricks.

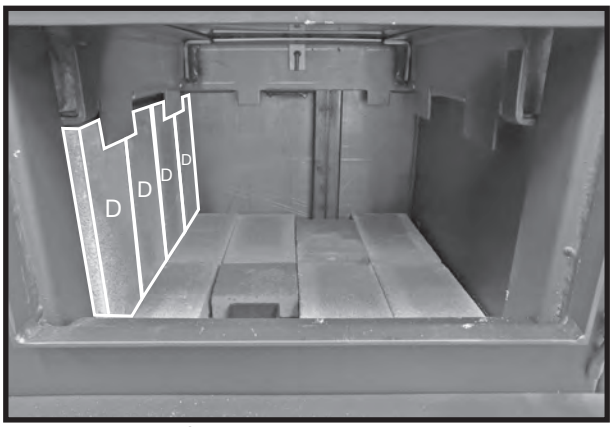

Figure 16: Left wall bricks in place.

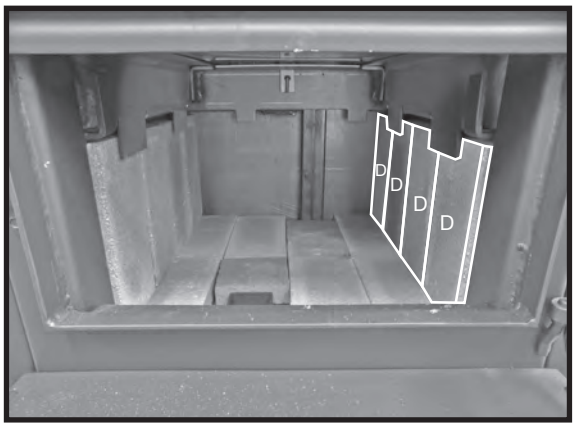

Figure 17: Bricks on right side wall in place.

3. The rear wall is last. The rear bricks also stand on end and will stand on top of the floor bricks.

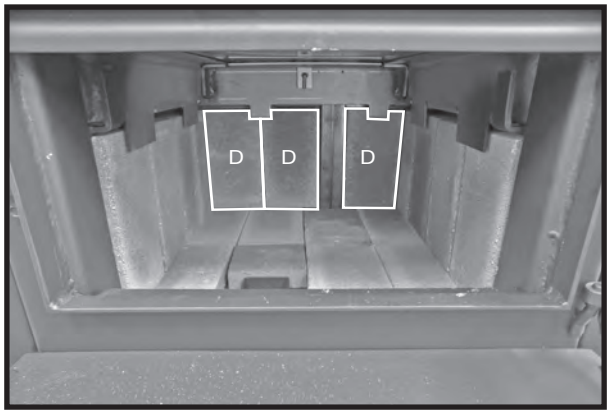

Figure 18: Rear wall firebrick installation complete.

Trouble Shooting

Problem	Cause	Cure
Excessive Creosote Build-up	1) Wood is too wet	- Use dry wood
	2) Turning down air control too soon	- Do not turn down until: a) there is a good bed of coals b) the wood is charred
	3) Draft too low	- Chimney plugged or restricted, check flue - Improper chimney height and/or diameter - Provide outside air for combustion - Check draft in chimney and system, alter as needed.
Glass is Dirty	1) See 1, 2, and 3 above	
	2) Door Gasket leakage	- Replace gasket - Check door latch
Low Heat Output	1) Wood may be wet	- Check wood and use drier wood if required.
	2) Fire too small	- Build a larger fire - Open draft control to increase burn rate.
	3) Draft too low	- Chimney plugged or restricted Inspect and clean
Won't Burn Overnight	1) Air control set too high	- Set control lower
	2) Not enough wood	- Unsplit wood is preferred for overnight burns
	3) Draft too high	- Excessive chimney height and/or diameter, see page 11
Stove Won't Burn	1) Combustion air supply is blocked	- Check outside air supply for obstructions - Check that room air cover is removed.
		- Chimney plugged or restricted Inspect and clean

Wood Products Warranty

Pacific Energy extends the following warranty coverage to the original registered purchaser of the product:

LTD Lifetime Coverage (10 years)
Limited lifetime coverage is extended to the following components (parts only) porcelain finish, glass (glass for thermal breakage only, not impact), plating, firebox and baffle.

3 Year Comprehensive
Pacific Energy will replace or repair any part found to be defective (parts and labor) for three years from the date of purchase.

This coverage includes electrical components (blowers, speed controls and thermal switches).

Pacific Energy recommends using a certified installer.

Conditions
Your stove has been designed to perform in the harshest climates in North America. You can be confident that under normal use your stove will be trouble free for many years. If your stove is prematurely deteriorating this is a significant indicator of improper usage, for example; excessive draft, heating to large an area, contaminated fuel - such as high sodium content or plastics and chemicals. Please be aware, these conditions may be reasons to void your warranty.

- For wood products - All installations must be installed according to all applicable local and national codes. It is the responsibility of the installer to ensure the unit is operating correctly at installation.
- Any part that shows in our judgment evidence of defect shall be repaired, replaced or refunded at Pacific Energy's option. The defective part may be required to be returned to Pacific Energy or an accredited agent, transportation prepaid.
- Porcelain is warranted for gloss retention. Certain colors may darken when heated and return to the original shade when cool. As a man-made finish it is subject to minor imperfections.
- Glass is warranted against thermal breakage.
- Plating is warranted against tarnishing. Gold plating may attain a deeper color with use.

Exclusions
- Limited Lifetime coverage - Lifetime coverage is limited to the repair, replacement or refund of the indicated parts only. Labor charges are not covered under the lifetime warranty.
- The following items are not included in the Lifetime Warranty: firebox rails and heat shields.
- The following parts are not warranted: firebrick, gaskets and ceramic fiber blankets.
- This warranty does not apply to any part that shows evidence of misuse, abuse, improper installation, accident, lack of maintenance, or modification.
- Pacific Energy shall in no event be liable for any special, indirect or consequential damages of any nature whatsoever which are in excess of the original purchase price of the product.
- Pacific Energy is not responsible for installation, operational or environmental conditions beyond our control.
- (The company may, at its discretion, discharge all obligations by refunding the wholesale price of the defective part.)
